

A Contextual Foundation for Mechanics, Thermodynamics, and Evolution

Table of Contents

1.	Introduction.....	1
1.1	The Problems of Time	1
1.2	The Problem of Contextuality.....	3
1.3	The Problem of Measurement.....	3
1.4	The Problem of Nonlocality.....	4
1.5	We Need a Better Conceptual Model.....	4
2.	The Dissipative Conceptual Model of State	5
2.1	The Postulates of State.....	5
2.2	The Dissipative Classical State	9
2.3	The Dissipative Quantum State.....	9
2.4	The Quantization and Refinement of Space	10
2.5	Entropy, Wavefunction Collapse, and Measurement	12
3.	The Dissipative Conceptual Model of Time.....	13
3.1	The Two Components of System Time	13
3.2	Reference Time	14
3.3	Space, Time, and Nonlocality	13
4.	The Dissipative Conceptual Model of Process	16
4.1	The Dissipative Homeostate	16
4.2	The Constructive Power of Dissipation.....	18
4.3	Whirlpools and Entropy Production.....	20
4.4	Oscillations and Synchronization.....	22
5.	Discussion.....	24
5.1	Why DCM?.....	24
5.2	Is Contextuality Objective?.....	25
5.3	Cosmological Implications	26
5.4	Origin and Evolution of Life.....	27
6.	Summary and Conclusions	28
	References	29
