

Ethical Statement

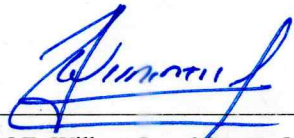

April 12th, 2023

The procedures performed in the study title "*Development of a non-invasive biosensor with an erbium-phthalocyanine colloid for the detection of glucose in saliva*" involving human participants were in accordance with the ethical standards of the institutional research committee and with the 1964 Helsinki declaration and its later amendments or comparable ethical standards. Informed consent was obtained from all individual participants included in the study.

The study was conducted in accordance with the Declaration of Helsinki, and the protocol was approved by the Ethics Committee of Instituto Tecnológico Superior Progreso. Written informed consent by the patients was waived due to a retrospective nature of our study.
