ABSTRACT

The aim of this paper is to identify and document some functions and contexts of traditional pottery within northern Ghana. The descriptive approach of the qualitative research methodology was employed. Interview and observation methods were employed as the data collection methods. They were used to ascertain reasons why some pottery are engaged in certain contexts and for certain functions. The data was tabulated to include the traditional name of the pot, the function and the context. The data were then analyzed and the indications were that, the potters make interesting forms of traditional pottery for different purposes; and the local name given to each pot perfectly defines their functions and contexts within northern Ghana. On the flipside of the coin, the function and context of every pot can also be dictated by its end user. Based on this, the researchers were able to discover some functions and contexts of the indigenous pottery which were grouped into some groups. On the first hand, the researchers classified the functions into five groups of purpose. These included: domestic purposes, religious purposes, agricultural purposes, rites of passage purposes and traditional herbal medicinal purposes. On other hand, seven groups of contexts were also discovered at the time of the study. These included: courtyards, bedrooms, bathrooms, graveyards, kitchens, shrines, and hencoops as places where these pots can be found among the people of the Northern Ghana.

Keywords: Functions, Contexts, Traditional Pottery, Northern, Ghana
INTRODUCTION

In basic Functionalist terms, if an item exists in a context it must have a reason for existing and hence it must serve some kind of function (Livesey, 2010). Prelude efforts made by researchers to define the functions and contexts of traditional pottery often involve quite a lot of concepts that seem to need widespread explanation. Since every traditional pottery produced has its moment in history – a time when it has existing context and function; and a time when the tide of social activities in their context and function flows in its favor (Crickmay, 2015). The literature on traditional pottery shows a possible method of portraying and documenting the functions and contexts sufficiently, but it is neither straight to the point nor workable enough for a successful description of their functions and contexts. This is because when an indigenous pot is not carefully used in time and properly at its defined context their functions disappear. But these are things that the researchers investigated, and for which should always seek and find direct and indirect evidence as well as truth. Commonly speaking, Context and function (with reference to traditional pottery in Ghana) are everything. They shape the meaning of all traditional pottery generally. Without context, traditional pottery can’t function effectively. When traditional pottery is produced and delivered in one particular context, but received in another or different context it likely leads to malfunction (Bradley, 2014). What then are the word meanings of context and function? The context of a work of art refers to the cultural constraints and expectations that surrounded and influenced the artist's creation (Tmcadanel, 2013). Quite apart from this definition, Tmcadanel (2013) made it clear that, contexts of traditional pottery usually include religious beliefs of both the artist and the larger community, the political events of the time and the artist's view of those events, the work of contemporary artists, the cultural values and conflicting perspectives of the end users. On the other side, function can be defined as the
aim of a product and the way it operates. The function of a product is what you can do with it and what you achieve from it e.g. storing water is the function of a traditional water cooler (Ilse, Pieter, & Prabhu, 2005). They also did mention that, to achieve a function, a product needs to be used in a prescribed way at a given geographical area. Conclusions drawn from the above definitions indicate that, traditional pottery context and function may be separate in time, but they are often equally important to the artifact. The fact is that within milliseconds and before viewers and end users has had a chance to even think about the decorative aspect of a traditional pot; already its context and function sets an atmosphere for everything that follows. Due to poor imprecise documentation regarding these contexts and function, the research sort to answer questions about some of the functions and contexts of existing traditional pottery in Northern Ghana?

CONCEPTS AND METHODS

Concept

This paper aims at identification of some functions and contexts of traditional pottery in Northern Ghana. This is to create worldwide awareness on the functions and contexts of pottery in northern Ghana. In addition, the study was done to contribute to the constructive documentation of these existing pottery functions and contexts in northern Ghana.

Methods

The populations of the study include pottery makers and user in selected pottery communities in the Northern Sector of Ghana. These include seven localities from six districts as presented in table 1, also including respondents’ statistics. This is also supported by figure 1: a display of the map of Ghana showing the location of the sites of the study.

Due to the unpredictability of the data, the qualitative research approach was adopted. In this regard, the researchers sort to understand the functions and contexts of some traditional
pottery in the Northern Ghana through visiting of their respective sites and recording data through personal contacts with the people. Due to the descriptive nature of the research design, the data was subjected to comparative analysis, an analysis fashioned based on researchers’ previous experience in literature and field data. The data include photographs of traditional pottery, participant’s audio/video recordings based on interviews, direct observations, and participant-observation as the data collection methods.

With reference to Creswell (2003), it was clear to the researchers that this research was on participants’ perceptions and experiences, and the way they make sense of their lives with traditional pottery. A distinguishing mark of case study research is the use of manifold data sources, an approach which also improve data reliability (Yin, 2003).

The subject and methods of the study were explained to the traditional potters and end users when they were first approached. No specific kind of information was mentioned as being of particular importance for the study, nor was any information about the study concealed from them. They were assured that the study required them to spend very little extra time, although any additional time or information that they might be willing to volunteer would be more than welcome. The observation and interviews were with no attempt to control or influence the pottery contexts and functions. Some identified traditional pottery were observed, one by one, as the participants were performing their regular jobs related to the pottery functions and that of their contexts. Using the purposeful sampling design, nine different types of oblivious traditional pottery were observed at each individual traditional home located among the three Northern Regions of Ghana. Some traditional potters and pottery users were asked to think aloud but only to the extent that such verbalization would not interfere with their pottery functions and contexts. These verbalizations were recorded and transcribed based on the data collection protocol. Identified traditional potters and pottery users in northern Ghana were observed during pottery activities based on functions and contexts.
observation period was kept to the minimum in order to avoid any possible negative influence on the human behavior that may affect the data. Most traditional potters and pottery users, however, initiated conservations about their specific pottery functions and contexts. Questions during such instances attempted to keep the conservation alive and were meant to be as nondirective as possible. At the end of the observation period, when the first version of the description of traditional pottery functions and contexts were drafted, the potters and pottery users were interviewed. The interviews took the form of informal conservation which was the natural thing for the potters and pottery users to do after the researchers spend a period of time with their observation guide. The researchers asked many questions to clarify issues that arose during the observation period but could not be asked then. In the interview, questions were directed to aspects of the traditional pottery functions and contexts that were not traditionally accessible by the researchers. The recorded verbalization of the traditional potters and pottery user thought processes during the observation made, the transcribed interviews, pictures took and audio/video recorded were the data subject to comparative and cognitive analysis to arrive at the results for the study.

RESULTS AND DISCUSSION

This segment contains the various studies made by the researchers on the oblivious indigenous pottery functions and contexts in the northern part of Ghana. Clearly speaking, before the researchers could determine the functions and contexts of the indigenous pottery, the concentration of the study was entirely based on their local names. This is simply because; the local name of an indigenous pot perfectly defines its functions and context within the locality. The table below is a setup of the functions and contexts of the indigenous pottery identified by the researchers. Generally, the table is divided into three columns; that is, the local name/location of the pot, its function and lastly its context.

<td><strong>Plate 3: YaugSiong (grave making pot)</strong>&lt;br&gt;Location: Palnaba (Pusiga District)</td>
<td>Purposely it is produced for marking graves by burying it half way in the grave.</td>
<td>It can be located in the graveyard.</td>
</tr>
<tr>
<td><strong>Plate 4: Laaleng (cooking pot)</strong>&lt;br&gt;Location: Tuggo (Lawra District)</td>
<td>It is generally used for the cooking of all kinds of indigenous food and also for the boiling of herbs</td>
<td>Located in the kitchen or the courtyard of its rightful owner.</td>
</tr>
</tbody>
</table>
Plate 5: A set of storage system
Location: Sirigu(Kasina/Nankana West District)

The first pot from the top is called Pilico, lamulgah (red pot) refers to the second two and the bottom pot is called kalinga. These are generally arranged together to serve the purpose of preserving food in its raw form ranging from cereals to spices. Inclusively are; fish, pepper, okro, maize, dry meat, etc. Basically, It is located in some rooms of elderly women within Sirigu community and beyond.

Plate 6: Danveak (hearth pots)
Location: Zubulga (Pusiga District)

These are pots used to create the hearth at the fireplace/kitchen. It is usually done to uplift the cooking pot away from the firewood at a reasonable distance for an easy spread of fire. Basically, it is located in the kitchen or the courtyard of its rightful owner.

Plate 7: Lubusahkpelli (washbasin)
Location: Naakpili (Saboba District)

It is generally used in containing water purposely for bathing and washing clothing. Located in the bathroom of its rightful owner.
CONCLUSION

In conclusion, studies made by the researchers clearly shows that traditional pottery found in northern Ghana are generally produced from the idea of domestic functions, religious functions, and rites of passage functions. On the flip side of the coin, contexts of traditional pottery found at in northern Ghana included the courtyards, bedrooms, bathrooms, graveyards and the kitchens of their rightful owners.

RECOMMENDATIONS

The study made by the researchers show that some associated functions and contexts of traditional pottery in Northern Ghana has been grown into extinct (due to the higher demand of domestic metallic and plastic utilitarian goods). It is therefore recommended that research
should be done on these potteries in other to understand and document their functions and contexts and how they can be brought back to life.

Even though, studies have been made on the identification of the functions and contexts of traditional pottery in northern Ghana, it is recommended that studies should also be made on the forming and firing techniques of traditional pottery in northern Ghana. It is also recommended that, research work should be done on the concepts associated with traditional decorative techniques on pottery in northern Ghana. Finally, the researcher recommends that, studies should be done on the influence of African aesthetics on traditional pottery in northern Ghana.
