**Abstract:** It could be said with some precision, that in Antiquity the myth of the Argonauts and especially of Medea herself as a personage of this myth, has enjoyed popularity not only in Greece but also outside its territories. The first among the Italic tribes to be introduced to the personage of Medea no doubt were the Etruscans, who were the first to establish intensive contacts with the Greeks from Euboea founding a colony in Cumae, Italy. It is noteworthy that the first image of Medea in the World Art is seen on Etruscan ceramics. The paper gives detailed analyses of Etruscan artefacts on which Medea appears, providing a solid precondition for substantive conclusions. Some new versions of an interpretation expressed in relation to each of the artefacts on the basis of critical analysis of Etruscan archeological material, of classical texts and of previously undertaken modern research, are provided. Images of Medea in Etruscan art confirmed from the Orientalist era to the Hellenization period represent an original, local interpretation of Medea's image. Medea's magical art turned out to be familiar to the Etruscans, who were well known all throughout the Mediterranean for divination and being experts of magic. In contrast to the Greeks, they turned Medea into an object of cult worship, identifying her with the Etruscan sun god Cavatha.

**Keywords:** keyword 1 Medea 2 Argonauts; 3 Etruscan Art; 4. Cavatha

**1. Introduction**

The first among the Italic tribes to be introduced to the personage of Medea no doubt were the Etruscans, who were the first to establish intensive contacts with the Greeks from Euboea founding a colony in Cumae, Italy\(^1\). The personage of Medea was reflected in the mythological perceptions and worship of cults alternating with Circe, Marica, Bona Dea, Angitia, and Cavatha\(^2\) is present in the perceptions of the Ausones, Marsians, Latins, and Etruscans\(^3\). It is noteworthy that she is encountered in the most archaic layers of the mythological narratives of the Apennine Peninsula, in the so-called genealogical myths. Consequently, this myth *Via Etrusca* became known to other Italic peoples. Information regarding the Etruscan perceptions of Medea is

\(^{1}\) Cristofani 1999, 83

\(^{2}\) Kobakhidze 2002, 70-79

\(^{3}\) Kobakhidze 2007, 102-108
primarily derived from different genres of antique literature, which so to say, can be termed as secondary sources. Etruscan works of art themselves can be labeled as primary sources.

It is noteworthy that there has been no complex study of the appearance of Medea in Etruscan art, which is important in providing a complete account of the role of Medea not only in Etruscan but also in Antique and world culture.

It is apparent that the chronology of the spread of the Argonaut myth in Etruria cannot be directly connected to the appearance of Medea's image on objects made in local Etruscan workshops, because it was naturally preceded by the import of works of Greek art (mostly ceramic) showing this myth into Etruria.

Greek myths also appear on ceramic products belonging to various periods in the wake of imported ceramics.

Locally produced ceramics divided into a few classes from the end of the 8th century to the first quarter of the 6th century BC belong to the earliest period. These are: Etruscan geometric ceramics, painted ceramics of the Orientalist period from Caere, ceramics with white figures done on a red background, the so-called white on red, bucchero, and Etruscan-Corinthian ceramics.4

1. Hydria from Caere.

A supposed image of Medea first appeared in world art on Etruscan ceramics made from bucchero during the Orientalist period. Particularly, a hydria dating from 660-640 BC has been found in the Etruscan city of Caere (Etr. Cisra, Gr. Agylla -modern-day Cerveteri), where according to widespread opinion, Medea and a three-headed dragon have been pictured.

A few words regarding the city of Caere itself where an interesting work of Etruscan art was discovered.

Information about the city itself bears importance in light of the fact that Etruria had never been a unified state. The term “Etruria” implied the conventional unity of cities quite different from each other, with the city of Caere being distinguished for its location and the high level of development of the culture.

Due to proximity to the sea, Caere can be boldly called an Etruscan naval gate. This was really the reason for Caere's especially intense contact with the Greeks, Phoenicians and Carthaginians, with this being further reflected on their varied culture. Caere was one of the important members of the thalassocracy of Etruscan cities, giving it the means to found such colonies as the quite distant Marseilles5 and receive the honor of participating in such international and massive projects as constructing the treasury of Delphi.6 Naval might was the not the only reason for Caere's close

4 Bellelli 2008, 27

5 Michetti 2016, 73

6 Brique 2013, 47
relationship with the Greeks. According to tradition, Caere is considered to have been founded by the Pelasgians of Thessaly two generations before the Trojan War along with the city of Spina. Hellanicus of Mytilene argued that the Pelasgians of Thessaly, after their expulsion by the Greeks, migrated to Italy, landed near Spina, founded Cortona, and changed their name into “Tyrrenians”, which is also corroborated by Dionysius of Halicarnassus.

Thus at one glance, there were some certain preconditions for an interest in the myth of the Argonauts here in Caere where it was considered to be a place of the settlement of the Thessalian Pelasgians. The distant voyage of Jason, the Thessalian hero, was reflected by this myth.

Let's return to the image presented on the Cerveteri hydria, which to this day has been given many interpretations. Ronald Dick, who first published this image in 1981, took it to be an episode of the battle between Heracles and the Hydra, but being characteristic of the 7th century, the typical Etruscan woman's attire worn by this figure stripped away support for Dick's version (Figure 1-2)

---

7 Hellanicus, EGM fr. 4, in Dion. Hal., Ant Rom. 1.28.3;

8 Dion. Hal. Ant. Rom I, 18, 3-5;

10 Bonfante 2003, 216
Figure 1.
The woman wrapped in a long cloak, facing the three-headed snake, and touching the two upper heads with outstretched arms has been quite enthusiastically connected to the episode of the Argonaut myth according to which Medea puts the dragon guarding the Golden Fleece to sleep with a spell (Figure 3).
A supposition was also expressed that Medea might be generally pictured as a sorceress. The basic argument of a viewpoint equating this woman's figure to Medea is represented by the fact that an image of Medea with the corresponding inscription “Metaía” has been shown on an Etruscan olpe made in approximately the same period and in the same workshop, which we will focus upon below. Apart from this, the connection of Medea to the woman pictured on an Etruscan olpe, at one glance, is bolstered by the fact that Medea appears on Greek ceramics surrounded by snakes. Particularly, Medea might be pictured in the middle of two snakes on two Attic lekythoses dated to 530 BC. One is kept at the British Museum (Figure 4)

\(^1\)http://www.gramma.it/eOS2/index.php?id_articolo=1378
About four years ago, while analyzing this particular work, Daniel Ogden notes in a quite interesting book printed at Oxford *Drakon. Dragon Myth and Serpent Cult in the Greek and Roman Worlds*\textsuperscript{12} that connecting the image to Medea and the dragon from Colchis (accordingly, here not only Medea, but the earliest image of the Colchis dragon would be shown) is difficult to imagine. It is basically stated in his argumentation that the Golden Fleece appears nowhere on the hydria and the Colchis dragon would never be pictured with three heads. Neither can Ogden support the connection of the woman's image with one of the Hesperides, because neither has the Hesperides' garden been pictured, nor do the other Hesperides appear in the proximity of the monster Ladon (if this is clearly Ladon).

After a broad excursion into Greek mythology and cult worship dedicated to the relationship of a virgin, priestess, and snakes, where the author supports himself on excerpts of compositions by Herodotus, Aelianus, Lucian, Pausanias, and others, Ogden exchanges it with material on the

\textsuperscript{12} Ogden 2013, 203 and foll.
Romans, even searching for a key here among Roman sources and archaeological material. Absolutely identical subject material is not confirmed, although a search for certain parallels in Italian material can be managed. In this case the Marsian goddess Angitia is implied, who like the Marsians themselves, enjoyed a reputation as a snake tamer among people inhabiting ancient Italy. It must be taken into account that aside from the three-headed snake, two other snakes appear on the Etruscan olpe with their heads pointing towards the figure of the woman.

It is interesting that stemming from the fact of the Marsian language differing a little bit from Latin\textsuperscript{13}, the etymology of the name of the Marsian goddess (Angitia) can be precisely connected to the Latin for snake “anguis”. The genealogical myth of the Marsians given by Plinius is examined in detail in my aforementioned article “Medea in the Religion and Mythology of Ancient Italic People”. Plinius notes that Circe's son Marsyas was an ancestor of the Marsians\textsuperscript{14}. It is interesting that Servius clearly points out that in Marsian mythology, Circe is an equivalent to the goddess Angitia\textsuperscript{15}. At the same time, some cases of alteration between Circe, Medea, and Angitia have been demonstrated by me. It is a noteworthy fact that Caere, where the hydria was found, borders on land settled by the Marsians, providing the supposition that the image of the snake taming woman on the vessel might be inspired by Marsian myths as well.

If Antigia of the Marsians is pictured on the Etruscan olpe, what relation did it have to Etruscan conceptions, or to say it otherwise, what local significance did a snake itself have in Etruscan folk tales? Why did the Marsians' conceptions turn out to be relevant for the Etruscans? In my opinion, the key for this is offered by Etruscan art itself. Here, not only is the theme of goddesses with snakes implied, which was popular all throughout the Mediterranean starting from the Minoan period and which is confirmed in images of Vanth, the goddess of death in the Etruscan pantheon, as can be clearly seen on a bronze sculpture from the 5\textsuperscript{th} century BC at the British Museum\textsuperscript{16} (Figure 6.).

\textsuperscript{13}Conway 1897, 289-299

\textsuperscript{14} Plin. \textit{Nat. Hist.}, VII, 15

\textsuperscript{15} Serv. \textit{Ad Aeneid.}, VII, 750

One's attention is captured precisely by the three-headed snake shown on the Etruscan hydria, which, as was noted, appears nowhere in the material connected to Medea, Circe, nor any of the other goddesses with snakes.

A Thracian parallel is worth noting, indicated by Nancy de Grummond in connection to the image of the three-headed snake and the woman. An image of a three-headed snake and a woman is engraved on a silver Thracian plate gilded with gold from Letnitsa (Bulgaria) dating to 350 BC, with the woman holding a mirror. (Figure 7.)

---

17 de Grummond 2006, 5.
But the most noteworthy thing is the Etruscan material itself and especially the image of the three-headed snake, which had been discovered on some wall art of an Etruscan tomb a few years ago. Particularly in 2003, in the Tomba della Quadriga Infernale at the necropolis of Pianacce dating to the beginning of the 4th century BC, a three-headed snake can be seen pictured in the underworld18 (Figure 8-9).

18http://www.museosarteano.it/pagina4.php?linguanumero=2#iniziopagin
This tomb is noteworthy in many respects and has not been an object of thorough study for the time being, although in this case, it reveals that the image of a three-headed snake is not foreign to
Etruscan art and is connected to the underworld. According to one idea, the three-headed snake with beards can be perceived as a guardian of the underworld.\textsuperscript{19}

In this respect, a theme of the relationship of the Etruscan snake to Cerberus is no less interesting, being an issue of separate research, although it must be noted that Cerberus, having snakes appearing on its body, is represented on a famous Ionian hydria from the Louvre Museum Collection of the Archaic Period. This hydria was also found in Cerveteri and is dated to 510 BC (Figure 10).

\begin{figure}
\centering
\includegraphics[width=0.5\textwidth]{Figure_10.png}
\caption{Figure 10.}
\end{figure}

Thus, there is a supposition that the hydria discovered in Cerveteri with the image of the woman and a three-headed snake is not connected to Medea and must supposedly reflect the voyage of a deceased person to the underworld or some ritual connected to their burial, where the three-headed snake shows a creature living in (or guarding) the underworld, with this creature in turn being approached by a priestess or goddess (possibly Angitia or Vanth), or the deceased herself.

2. Olpe From Caere.

Identifying the woman pictured on the aforementioned Etruscan olpe dating to 630 BC found right in Caere to Medea is no cause to doubt, because it is accompanied by a proper inscription “Metaia”, which according to a majority of researchers, represents an Etruscan transliteration of Medea's name.

\textsuperscript{19} Pieraccini 2016, 100
Medea is seen surrounded by the Argonauts and Daedalus (Taitale) on this vessel found in the same tomb. It must be said like Medea, this is the first image of Daedalus in world art.

This vessel created during the Orientalist period of Etruscan art and made from bucchero is dated to 630 BC, having been discovered in a grave. Today it is part of the Villa Giulia Exhibit.

What is pictured on this olpe? There are some zoomorphic images on the top frieze: a lion, some panthers, and floral ornaments (Figure 11-12).
The lion is placed in the center with the panthers flanking it. These panthers have a human foot sticking out of their mouths, whereas on the lower frieze, which is noteworthy for this paper, there are some carved out scenes in the following sequence (from left to right) (Figure 13):

1. Two boxers sparring with each other, with each wearing only one sandal on a foot.
2. A young man coming up out of a small, ritual (?) cauldron.

3. A woman wearing a long robe coming towards a columnar wedge holding a staff in her left hand and having her right hand lifted up in the air. She has the inscription “Metaia” on her clothing.

4. 6 naked men following after each other in a line. The leader of the procession has his hand upraised like Medea. They are holding a long, fabric-like item bearing the inscription “Kanna”.

5. A flying, winged man with hands lifted high having the inscription of “Taitale” between one of the wings and the body.

It will not be an exaggeration to say that many researchers more or less connected to classical art, mythology, or literature have had a desire for interpreting this scene. This is understandable, because this has something to do with the first images of Medea and Daedalus in world art! Many investigations have been devoted to these images and it is noteworthy that one of them belongs to Nino Lortkipanidze, an exceptional Georgian researcher who has specially examined this specific work in a paper “The Reflection of the Argonaut Myth in Early Greek Culture”.

Along with this, many questions arose due to the image, particularly the mythological theme presented on bucchero. Some of them are: Which scene connected to Medea is pictured here, who are these men going in the procession, what do the boxers show, what is the connection of all this to Daedalus, is this one episode or a cyclic alternation of episodes?

The paper format does not provide the means of presenting every idea connected to the theme in a detailed manner, thus you will be introduced to the concise contents of the basic versions through general theses and be offered a few personal interpretations as well.

2.1. The young man coming up out of the three-legged cauldron and Metaia

In the general opinion of researchers, the scene where Medea rejuvenates through her sorcery must be shown here, whereas the young man coming up out of the small cauldron might be Aeson, Pelias, or Jason, who was prepared beforehand by Medea for Aeëtes' difficult tasks. It’s possible that all of them together are implied here so Medea's image as a sorceress might be generalized in this way.

Nino Lortkipanidze justly notes that “flatly identifying the pictured young man with someone becomes more difficult due to the fact that all the literary sources connected to the miracle of rejuvenation by Medea belong to a period considerably later than 630 BC.”

---

20 Rizzo, Martelli, 1993, 32

21 M. Schmidt, 1986

Yet, the earliest of these literary sources is a fact regarding Jason's rejuvenation by Medea preserved by Simonides\textsuperscript{23}, when a fact concerning Aeson's rejuvenation appears considerably later with Ovid\textsuperscript{24}. Along with this, which will be examined below, the scene of Aeson's rejuvenation has never been presented in art. In the classical age, rejuvenation generally implies a change from one age to another – a transformation from an old person to a young one, or that of a young man to a teenager or child.\textsuperscript{25}

In regard to connecting the young man emerging from the cauldron on the Etruscan olpe to Pelias, this is impossible according to the myth, for Pelias' rejuvenation had generally never taken place – his body was boiled in a cauldron and he passed away as an old man. Let's see which version of the theme is more frequently represented in other Etruscan works, even in a later period. Two 4\textsuperscript{th} century BC Etruscan mirrors of the Hellenization period will be examined as examples.

The figures of three standing women and one man sitting down accompanied by the inscriptions Metvia, Menrva, Rescial, and Heasun are shown on the first mirror, which was found in Talamone in 1878 and is kept today at the British Museum\textsuperscript{26}. Metvia\textsuperscript{27} is Medea holding a drinking bowl in her right hand and bringing it to the lips of an almost unconscious Heasun (Jason) (Figure 14 a). Menrva, the Etruscan Athena and easily identifiable with a garment bearing an image of the Gorgon Medusa, tries to hold Jason's neck with her right hand while holding an oinochoe in her left, in which a magical liquid has supposedly been poured. A bird flies close to her hand.

\textsuperscript{23}Simonides, fr. 204

\textsuperscript{24}Ovid. Met.7. 159-293

\textsuperscript{25}Graf 1997,41

\textsuperscript{26}London, British Museum, GR 1901.6-18.1.

\textsuperscript{27}The transliteration of the Greek Μήδεια into the Etruscan forms of Metaia, Metua, and Metvia, according to some researchers' opinions, indicates various sources of borrowing - Rigobianco 2013. For example, in the case of Metaia, the name is fitted to the form of local names widespread in Caere - Rizzo, Martelli 1993,47
It's interesting that a similar oinochoe is held by Menrva/Athena on the pediment of the 5th century BC Temple A at the Caere port of Pyrgi, where an episode from the play *Seven Against Thebes* is shown. As it seems, here Athena is trying to bestow immortality on Tydeus\textsuperscript{28} (Figure 15).

\textsuperscript{28}Terracotta plaque from Pyrgi, Rome, Villa Giulia
In regard to Rescial being pictured on the mirror, she might be one of the Lasas represented on a few Etruscan mirrors.\textsuperscript{29} Definitively, in the opinion of some researchers, this scene shows the Colchian episode of the Argonaut myth, where Medea gives Jason a magical liquid to drink in order to successfully complete Aeëtes' difficult tasks.\textsuperscript{30} Unfortunately, there are no inscriptions on the second mirror, which was discovered in 1855 and is currently kept at the Cabinet des Medailles in Paris\textsuperscript{31} (Figure 14, b.). A man coming up out of a cauldron is shown here. The scene is attended by one elderly and one young man sitting on a bench and two women standing. In Jennifer Neils' opinion, the scene of Jason's rejuvenation in Iolcos is pictured here, attended by Pelias, his son Akastos, Medea, and supposedly one of Pelias' daughters, although it is possible for two of Pelias' daughters to be shown instead of Medea\textsuperscript{32}.

The episode shown on this mirror is analogous to scenes pictured on 5\textsuperscript{th} century Attic lekythoses where a young man in a cauldron also appears.

\textsuperscript{29}Bonfante, Bonfante, 2002, 204

\textsuperscript{30}Meyer 1980, 106, pl.26, 1.

\textsuperscript{31}Paris, Cabinet des Medailles,1329 (ex Opperman)

\textsuperscript{32}Neils 1994, 190
A scene having a black figure shown on an Attic lekythos discovered in Etruria will be cited as an example, which in the beginning was connected to the rejuvenation of Jason's father Aeson. (Figure 16).

As was pointed out above, this episode has been borrowed from Ovid and to this day has not been confirmed on any work of art, although later on it was interpreted as the episode of Jason's rejuvenation by Medea in Iolcos. This latter viewpoint really proved to be correct on the basis of some data regarding a red figure hydria discovered in Etruria, now kept at the British Museum and belonging to a Copenhagen artist. A white-haired Jason standing by a three-legged cauldron is pictured on it, who is watching how Medea boils a sheep within it (Figure 17).

---

33Attic lekythos with a black figure, Leiden, Rijksmuseum, Meyer 1980, 106, pl 69/70, 5

34Ovid. Met. 7. 159-293

35London, British Museum, E163, from Vulci
Accordingly, stemming from the fact that a scene of Aeson's rejuvenation has not been confirmed in art for the time being and as was previously determined, it's impossible for Pelias to be shown in this context, the young man coming up out of the cauldron on the Etruscan olpe must be Jason. Why is Jason's name not indicated on the Cerveteri olpe or how can his identification be carried out? In regard to the identification of Jason's image, in this respect, Jennifer Neils' remark in connection to Jason's images in classical art is of interest. She specifically notes that Jason does not have some mark differentiating him. He is frequently shown naked or with a traveler's cloak and cap, with him being encountered less frequently with a single sandal, as a rule.36

In regard to the reason as to why the name of the main character from the Argonaut myth is not shown beside Medea and Daedalus, this topic will be revisited upon presenting some final conclusions. Thus it is the supposition that the young man pictured on the olpe must be Jason, despite it not being accompanied by an inscription and accordingly, the central scene reflected on the Etruscan lekythos must show Jason's rejuvenation by Medea in Iolcos. In this respect, an observation of one

---

36Neils 2001 p.636
Etruscan ritual is interesting, being pictured on one of the Etruscan mirrors from 275-250 BC\textsuperscript{37}, where three children having the names Mariś Isminthians, Mariś Husmana, and Mariś Halna follow an initiation ritual by submerging themselves into a deep vessel filled with liquid\textsuperscript{38}. (Figure 18)

It is notable that the Etruscan god Maris, having three epithets embodying the god's various ages here, is shown on yet another bronze mirror where he is participating in the same initiation ritual by submerging himself into a liquid\textsuperscript{39}. Maris, who was a patron god of fertility in archaic Etruscan

\textsuperscript{37}London, British Museum, ES 257B – Bonfante 1986, 243

\textsuperscript{38} de Grummond, , 2006, 21

\textsuperscript{39} Pallottino1992 29-30; Wagenvoor 1956, 219 and foll.
conceptions, is a symbol of renewal and rebirth in his Ausone variant, having been shown as a centaur. He died and rose from the dead three times.\(^4^0\) (Figure 19)

The same ritual is seen on an Etruscan-Latin basket from Palestrina where Menrva stands in a cauldron of boiling liquid along with the armed Maris. Menrva has one hand wrapped around Maris' leg, whereas she holds a slender stick or spike up to his face or nose. Cerberus has been shown by Maris' head, whereas an image of a winged woman flies close to Menrva\(^4^1\) (Figure 19).

\[\text{Figure 19.}\]

It is noteworthy that despite the myth connected to the Argonauts being conveyed on the Etruscan olpe, the scene is adorned with Etruscan subjects: Medea is wearing Etruscan attire\(^4^2\), she is holding a staff, and there is a small cauldron characteristic of Etruscan rituals where Jason undergoes rejuvenation, being similar to Etruscan works of this period.

Now it is time for the next image, in particular a procession of six men bringing Kanna.

\(^4^0\) Ael. \textit{VH}, IX, 16; Kobakhidze 2005, 59

\(^4^1\) http://www.langkjer.dk/origin/2-26.htm

\(^4^2\) Bonfante, 2003, 216
2.2 The six men and Kanna

Maria Rizzo identifies these six men as the Argonauts, whereas the oblong object they are holding is not the Golden Fleece or the Argos, as it might have been according to the myth. Instead it is identified as the fabric mentioned in Pindar’s 4th Pithian ode, which the Argonauts had received as a sign of winning in a competition held on the island of Lemnos.43

While agreeing with Rizzo that the Lemnos episode of the Argonaut myth is shown here, Erica Simon considers that the Argonauts do not appear here, instead they are the Dactyls, patrons of the art of finding iron and greatly honored on the island of Lemnos. The Dactyls are holding a door bolt44. As demons of craftsmanship, the Dactyls are an ideal combination of Medea, having the art of magic and of Daedalus, a skilled artist.

In my opinion, the men pictured on the Cerveteri olpe following along behind Medea in a line create a unified composition with Medea and it is not possible to examine them independently from the figure of Medea. It is quite clear on the picture that Medea and the man at the head of the procession have the same gesture and the man’s forward placed foot touches Medea's long robe. At the same time, if this is from the Lemnos episode of the Argonauts, Medea has no business being here because this adventure befell the Argonauts before sailing to Colchis.

I think establishing the meaning of “kanna” will elucidate this topic even more. It is encountered in Etruscan texts only once in this form and, as it seems, is an adjective derived by the “na” suffix from kana and kana mentioned in other inscriptions. The “na” suffix is universally understood to mean “belonging”, or so to say “belonging to kana”. In regard to the meaning of cana/kana itself, it must mean “a decoration” or “gift”, being confirmed in a number of epigraphic works, according to the established version.45

Yet a version of various interpretations of this word exists according to which kanna must be read as kauna, with it possibly being connected to the Greek word χαυνάϰη, which itself is etymologically connected to “gunnaku” in Persian and Syriac, meaning “something made from fur”.46 In Burket's point of view, this word came into the Greek lexicon from Persian during the so-called Orientalization

---

43 Rizzo, Martelli, 1993,36-40

44 Simon 2000, 171-181

45 For a detailed overview of these forms in Etruscan epigraphic materials, cf. Rizzo, Martelli, 1993, 47-53

46 Pugliese Carratelli 1994, 363-369
period with the meaning of “a worsted wool cloak”. At one glance, on the basis of the latter interpretation of the Etruscan word, a certain justification can be found for connecting the image shown on the olpe to the Lemnos episode – the Argonauts bring a woolen fabric which they have earned as a prize for winning in a competition on Lemnos Island. Yet there has also been an attempt at connecting “kanna” to the Greek “κάννα” (reed) or “κάνναβις” (cannabis). There is also Schmidt’s viewpoint that this word might be connected to the Greek word “κάννας” which is encountered in Aristophanes’ The Wasps and means a sacral rug made from willow branches or grapevines.

I think the latter meaning of kanna might not precisely reflect the etymology of the Etruscan word, yet essentially be closer to this specific episode, whereas the fact that the ornament of this object is identical to the ornament shown on Medea the priestess’ cloak does not indicate that kanna is a fabric, as Rizzo deems it to be, but instead that this thing bears a sacral function. Accordingly it really might have been placed in the corresponding box located between Daedalus and the sixth man.

Thus, in my opinion, the main theme shown on the olpe, on the whole reflects the scene of Aeson’s rejuvenation by Medea in Iolcos, which in comparison to the Lemnos interpretation, might have been attended by all the participants of this narrative – Medea, the Argonauts, and Jason.

Let's examine the other figures presented on the bucchero for some final conclusions.

2.3. The boxers

In the case of connecting the scene pictured on the bucchero to the island of Lemnos, it's understandable who the boxers might be. They are clearly the Argonauts participating in a contest, earning a prize later on, too. There will be no digression here regarding the reason of why the

51 Rizzo, Martelli 1993, 17

52 Rizzo, Martelli 1993, 17
contestants are wearing only one sandal. It will only be noted according to one opinion that one of
the contestants might be Jason himself, who according to the myth, had lost a sandal in Pelias' palace
before his arrival, whereas in a second version, these are some other Argonauts competing against
each other for their other sandal.

Jennifer Neils notes that wearing a single sandal might have been significant for a young man
during an initiation. Nancy de Grummond is also a supporter of perceiving the scenes presented on
the olpe as an initiation ritual, seeing the beginning of the ritual precisely in the ritual competition,
which is followed by washing and receiving a garment as a gift.

The tradition of showing scenes of boxers in Etruscan art is interesting. An exhibit at the Dallas
Art Museum is noteworthy in this respect, which depicts some boxers fighting each other for a
prize shown on a second plane. The similarity of the poses between the boxers shown on this
ceramic object and the boxers on the olpe from Cerveteri are striking. In both cases the boxers have
one foot extended forward and placed on their opponent's foot. One hand is bent and the other is
brought forward. The Dallas ceramic is dated to 750 BC and can be boldly considered as a prototype
of the Cerveteri boxers (Figure 20).

56 de Grummond, 2006, 5-6
Figure 20.
It is interesting that even in the Mycenaean world, as it seems, boxing was conducted with these sort of moves, since the boxers pictured on a 1,300 BC amphora are placing their right, stretched-out foot on each other. Yet a greater similarity can be detected on the relief of a Mesopotamian terracota dating to approximately 2,000 BC, which was discovered in Eshnunna, at Tell Asmar in modern-day Iraq (Figure 21).

Despite the various interpretations of the theme shown on the Etruscan olpe, the majority of researchers agree on one thing that the boxers are the Argonauts. Supporters of the Lemnos interpretation consider this match to be a part of the Lemnos competition.

In my opinion, the ritual of Aeson's rejuvenation has a sacral significance indicated by the images of the priestess, the three-legged cauldron, and the sacred rug, at the same like all rituals according to the Etruscan tradition, being accompanied by ritual contests. The ritualistic nature of the athletic contests was clearly not foreign to other cultures, yet athletic Etruscan fights identified
basically from the art of tomb walls, as a rule, were accompanied by images of priestesses, which were foreign to the Greek world, for example. Let's examine an image showing a wrestling match for example, which is dated to 530 BC and is from a so-called Augur tomb at Tarquinia (Figure 22).

As is clearly seen, a priest holding an arched staff appears behind the contestants and tells the future according to some birds. Along with this, a ritual cauldron stands behind the wrestlers indicating the sacral nature of the contest.

Thus it is the opinion that the picture shown on the Etruscan olpe must be examined as a single narrative presented in one act, which is relevant to the Iolcos episode of the Argonaut myth. The central figure of this episode is Medea, who is rejuvenating Jason. This ritual is accompanied by athletic contests with the participation of the Argonauts and a procession of men (Argonauts) following Medea the priestess with a ritual gift.

In my version, the unified nature of the narrative shown on the Etruscan olpe is strengthened by the most recent archaeological data as well, according to which the scenes shown on the Etruscan ceramic product of this period reflect only one specific episode from a narrative of Greek mythology. A combination or alteration of a few episodes on it are only confirmed later on.57

Thus, this episode of the Argonaut myth which the Etruscans had learned about from the Greek colonists undergoes a certain transformation on Etruscan soil and becomes suited to the

57 Bellelli 2008, 27-28
expressive forms and cultural reality that were established in a conservative Etruscan society. Being shown on the Etruscan olpe, attired in Etruscan garments, and holding an Etruscan staff (which is not naturally encountered in an analogous scene on Greek vases), Medea performs a ritual by following Etruscan customs. Some boxers, participants of the procession bringing a sacral gift to the ritualistic pillar, are involved in the ritual. An Etruscan ritual of a man's initiation is reflected by the scene, in which a contest, bathing, and a sacrifice are presented.

It's true, there is a viewpoint that it is difficult to find some sort of logic in the principle of selecting an episode from Greek mythology on something locally made by the Etruscans. But in my opinion, this logic really exists, especially at the first stage of Greek-Etruscan relationships and until the so-called Hellenization period in Etruscan art began. Three specific factors will be named, which in our opinion, defined the depiction of the narrative connected to the Argonauts on an Etruscan olpe discovered in a tomb:

1. Caere's factor – as was mentioned before, naval might was not the only reason for Caere's close relationship with the Greeks. Along with the city of Spina, Caere was traditionally considered to have been founded by the Pelasgians of Thessaly, which is corroborated by Dionysius of Halicarnassus as well. Thus, the specific preconditions existed for an interest in the Argonaut myth reflecting the distant voyage of Jason, a Thessalian hero, right here in Caere, which was considered as place for the settlement of Pelasgians from Thessaly.

2. The sacral factor – This specific theme from the stories of the Argonauts had been selected due to its sacral function, which as it is known, is a very familiar theme to the Etruscans. They were distinguished all throughout the Mediterranean for knowledge in various arts of divination and for their religiosity.

3. The Iolcos episode of the Argonaut myth was interesting for the Etruscans precisely in the context of a deceased person's burial, for it reflected a process of rejuvenation, a renewal of life stirring hope for the deceased to be reborn.

4. An initiation ritual connected to renewal and rejuvenation existed in Etruscan cult worship, as was mentioned above.

The analysis of Etruscan ceramics from the Archaic period reveals that the Etruscans aspired towards naturalism when conveying Greek myths and maximally preserved independence in the context of assimilating the culture of other peoples.59

Szilágui's hypothesis is also worthy of note in connection with this, as he specially studied themes shown on Etruscan-Corinthian vases from 630-500 BC. Despite the existence of Greek

58Dion. Halic. I, 18, 3-5.

59 Smith 1999,179-206
characters on Etruscan ceramics, he had concluded that they had an Etruscan essence. Many things as such turned out in these works where the theme has not been identified and it is clearly based on an Etruscan context. He names one of the exhibits at Villa Giulia as an example of this, which is dated to the years 630-580 BC, where some themes completely unknown to Greek mythology are depicted.

This episode shown on the Etruscan olpe has been interpreted through local naturalism, which implied the placement of the ritual within a so-called Etruscan context and its depiction through attributes and forms (the boxer scene, the ritual of dedicating kanna, Medea depicted with a staff) characteristic of Etruscan cult worship and rituals.

2.4. Daedalus

Clearly, it's impossible to make a final conclusion without an analysis of Daedalus' figure, because even today, an interpretation of Daedalus surrounded by Medea and the Argonauts remains a problem for researchers. Currently, not one theme from Greek mythology or literature has been confirmed possibly connecting Daedalus and the characters of the Argonaut cycle to each other.

Supporters of identifying the theme shown on the olpe with the Lemnos episode of the Argonaut myth explain Daedalus' appearance beside Medea and the Argonauts (the Dactyls) in the following manner: As a craftsman and inventor bestowed with a special talent having been transformed into an epithet of craftsmanship. (In this case, the Greek adjective “δαιδάλος” is implied, which signifies one who is trained, a master craftsman and is used as an epithet by Pindar for Hephaestus. Hephaestus, who is battling against Ares, has the caption Δαιδάλος on an image of the one of the vessels.) 61, Daedalus is “ideally” connected to the island of Lemnos. Lemnos, where according to Homer 62, Hephaestus' blacksmith shop was located in the crater of an active volcano and where the capital was Hephaestia 63, represented a place in the world at that time renowned for the finding of metal and metallurgy. In the same respect, the Colchis “of plentiful gold” stirred up some interest, with this interesting the Etruscans as well, who were distinguished themselves for finding and working

61 - Preller, 1872, 148-149; Kerenyi, 1951,155

62 Preller, 1872,106.

63Barkert 1983,260
metal. Lemnos and the communities of Colchis were symbolically connected to each other.64 Accordingly, it is possible for Daedalus and the Argonauts (the Dactyls) to be associated together within this context. Nino Lortkipanidze names the extant ancient contacts between Etruria and the island of Lemnos as some of the motives and additional arguments for a depiction of the Lemnos episode of the Argonaut myth on this bucchero by the Etruscans. Particularly, according to her hypothesis, some information regarding the resettlement65 of the Tyrsenians (Etruscans) and the dwelling66 of Pelasgians and Tyrsenians on Lemnos are corroborated with Herodotus. This is confirmed by archaeological data, particularly by a stela from Lemnos dating to the 6th century BC made in a language cognate to Etruscan which indicates the organic connection existing between these two geographic centers.67

It's clear no one denies the close connection between Etruscan and the language of the Lemnos stela, which is clearly reflected in very recent research by de Simone, Hergon, and Maltzham68, yet the fact also has to be taken into account that aside from this specific case, no supposition has been expressed by researchers regarding the probable depiction of some mythological or historical fact connected to Lemnos on any work of Etruscan art. Along with this, I think a demonstration of the Etruscans' interest in finding metal on the tomb inventory is out of context.

At the same time, it must be justifiably noted that apart from Etruscans living in Caere having a mythological relation to the Thessalians, which was discussed above, the city of Tarquinia had some quite intimate connections with one more active area of the Argonaut myth, particularly with Corinth, which is confirmed in Antique literature. A myth narrated by Pausanias in Description of Greece is implied here, according to which Athena's temple, located in Corinth and called Salpinga, had been founded by Hegeleus, Tyrsenos' son (this is the Tyrsenos, who according to Herodotus, led the people from Lydia who were later given the king's name as an ethnonym) and Heracles' grandson. It was Hegeleus himself who taught the aristocrats having come from Temenos how to play the trumpet he had invented. This is why Athena's temple is called “The Trumpet”.69 The settlement of the

67 Lortkipanidze 2004, 37

69 Paus., II, 21, 3
Corinthian Demaratus in Etruria attests the extant bilateral connections between Etruria and Corinth. Livius tells us regarding this.

Let's return to the Etruscan olpe and examine the theme of Daedalus, Medea, and the Argonauts with the assumption that in all, the Lemnos episode is not pictured but instead the one at Iolcos, specifically the scene of Aeson's rejuvenation by Medea in which the Argonauts participate. How is it possible to include Daedalus in this context?

Before this topic is examined directly, a brief mythological digression will be presented possibly pointing out certain parallels between Daedalus and Medea. Having never ended up in one mythological narrative, it is notable that certain points of contact can be found for Medea and Daedalus, despite them being distinguished from ordinary mortals through special abilities, with the first being magic and the second being craftsmanship:

1. It is true that having a discussion about a precise chronology in a myth is impossible, but Medea and Daedalus are “contemporary” characters – Theseus, the one who defeats the Minotaur imprisoned in the labyrinth built by Daedalus, is Medea's step-child.

2. Daedalus is also connected to a solar cult like Medea (Medea, as the granddaughter of Helios; Daedalus as a servant of Pasiphae, Medea's aunt and Helios' daughter, a craftsman having flown towards the sun and lost his only son due to the sun's power);

3. Medea and Daedalus have committed the murder of a close relative in their homeland;

4. Like Medea, Daedalus also runs away from his homeland and then leaves his new homeland, where he loses his child (children). Both of them run to safety by flying away.

5. Medea defeats Talos, Daedalus' creation, with her sorcery.

6. And finally, an episode of great interest to us – the murder of Pelias carried out by Medea through someone else, Pelias' daughters, with the body of the king Iolcos being boiled in a bubbling cauldron(In general, a person's rejuvenation or them being brought to life by being boiled in a cauldron is not foreign to other epochs and cultures 71). This manifests a certain likeness to Daedalus' adventure, although being of a later character, is greatly interesting – having escaped from Minos, Daedalus seeks refuge in Sicilia with Cocalus, the king of Kamikos. When Minos comes looking for Daedalus, Cocalus makes him agree to bathe in the bathhouse. Here he is killed by Cocalus' daughters, or according to a second version, Daedalus throws him into the boiling water himself and kills him.72

72 Liv.I.34.1-7.

71 cf. Vojatzi 1982, 99-100

72 Hdt., vii.169, Diod. Sic.,IV, 78, 80; Hyg. Fab. 44; Paus. VII.4. §5; Ov. Met., Book VIII, 261
I will return to these parallels when making some final conclusions. Before presenting them, it seems necessary to examine Daedalus in the context of Etruscan art and mythology, without which it is impossible to make a correct analysis.

Today it is universally recognized that the term “Taitale” shown on the Etruscan olpe really fits with the Greek Daedalus. Images of Daedalus are encountered elsewhere in Etruscan art with precisely this form of the name (with some minor alterations – Taitle). In particular, it is on Carnelian scarab beetle at the British Museum\(^\text{73}\) (Figure 23).

![Figure 23.](image)

which is dated to 450-400 BC and shows Daedalus (Taitle) bobbing on top of the sea. It is also on a 5\(^\text{th}\) century BC golden bulla from the Walters Art Museum in Baltimore\(^\text{74}\), where Icarus (Vikape) is depicted together with Daedalus. This last inscription where the Greek digamma is reflected indicates

---

\(^{73}\) In regard to Etruscan scarabs and in connection to this specific work, cf. Krauskopf 1999, S. 405-421), 416

\(^{74}\) Rizzo, Martelli 1993, 44, 47-48
that the story of Daedalus and Icarus in Etruria had been known from an ancient time and it might have been borrowed from a Dorian source – either Corinth or Crete.\textsuperscript{75} (Figure 24).

Both these works are of a comparatively later time period and in comparison to the Cerveteri olpe belonging to the Orientalist period of Etruscan art, they were created during the Hellenization period of Etruscan art. Along with this, as on the scarab beetle, the episode of Daedalus' adventure well known from Greek mythology is shown on the bulla, which cannot be said for Daedalus' unknown narrative shown on the Etruscan olpe. Yet he is pictured here with wings like on the seal and the scarab beetle.

It must be noted that there is an idea that there is a border in the differentiation of functions of Daedalus' images during the sixth century in Etruscan art. Specifically, Daedalus must be perceived as a mythological character in the first half of the 7\textsuperscript{th}-6\textsuperscript{th} century BC, however as a so-called “local” craftsman and mythic hero in the second half of the 6\textsuperscript{th} century and the 5\textsuperscript{th} century BC.\textsuperscript{76}

\textsuperscript{75} Morris 1995,196

\textsuperscript{76}Prayon 1998, 102-105.
Accordingly, stemming from the dating of the Etruscan olpe, Daedalus must be perceived here as a mythological character, possibly as a certain demonic power in comparison to the Daedalus pictured on other Etruscan works, where he comes across as a craftsman or mythic hero.

What must this demonic character depict in this specific context?

A fact must be taken into account that in relation to Greek myths, Etruscan ceramic makers, as a rule, were characterised by an aspiration towards thematic transformation and variation, which reveals their artistic freedom and at the same time, a desire for Greek myths to be fitted to an Etruscan reality.\(^77\)

This trend is seen especially clearly during the Orientalist period itself, when the first steps were being taken in Etruscan-Greek relationships. At one glance, the Hellenic myths depicted on works of Etruscan art reflect the Greek narrative, but at the same time they do not coincide with the Greek model and offer other iconographic schemes. There are many anomalous themes differing from works of Greek art in these schemes. These themes had been created through the influence of local conceptions.\(^78\)

It is noteworthy that the Etruscan pantheon is still not “open” to foreign and Greek influences during the Orientalizing period.

If the scene depicted on the Etruscan olpe is viewed within this context, where, as was mentioned before, a ritual of Etruscan rejuvenation or rebirth can be deciphered beyond the Iolcos episode of Jason's rejuvenation by Medea, and in which a priestess and participants of various cult acts of a ritual initiation – that of a contest as well as a sacrifice – are included, it will be possible to explain Daedalus' appearance within this context as well.

If we again return to the Etruscan mirror on which three Mars are shown and the scene of the Etruscan rejuvenation is depicted, a few gods are presented here, including Menrva (Athena) and Turms. Mariś Isminthians sits on Turms' arm, a god corresponding to Hermes Psychopompos.\(^79\) Is the winged being corresponding to Teitale among them or not?

It must be said up front that a winged being in Etruscan art of the Orientalist period is only equivalent to a god. Winged beings generally reflect movement between the realms, whereas in tomb

\(^{77}\text{Maggiani 2008, 47–56.}^+

\(^{78}\text{de Grummond, 2006}^\

\(^{79}\text{van der Meer 1995 ,167}^\)
art – a movement from this world to the next, from death to life. Here, Daedalus must be examined as a winged, demonic power attending the scene of rejuvenation and rebirth.

Which god can attend this ritual?

Providing an answer to this complex question significantly digresses from the theme of the paper. At a glance, this scene, reflecting a rejuvenation ritual and implying rebirth, might have been attended by a psychopompos god, including Turms depicted on the British Museum mirror and many other gods connected to the underworld, of which many are represented in the Etruscan pantheon. Yet I think two factors must be given more consideration:

1. Local (in this case Caere) cults and their functions;
2. Represented images with the same expressive forms in the same chronological period.

To briefly formulate it – Which gods are depicted with wings among the honored gods in 7th century Caere and which of them can be connected to the renewal of life and rebirth?

Caere and its port Pyrgi were known for the temples of many gods. It must be mentioned that each Etruscan city had a so-called prominent god at various different times which has especially honored along with the common Etruscan gods. At this stage, 6 temples have been identified in Caere, with only two of them having been studied archaeologically. This is a temple, which in accordance with antique sources, was dedicated to either Leucothea (Pseudo Aristotle) or Ilithyia (Strabo) and is dated to the 5th century BC. There is also the 6th century temple of Uni. According to tradition, the temple of Leucothea at Caere had been founded by Pelasgians from Thessaly.

Today, Leucothea and Ilithyia have been identified with the Etruscan goddess Thesan by researchers.

Thesan the dawn goddess is an ancient winged goddess remembered in the form of Tes on the Liber Linteus. She was especially honored in Caere and Pyrgi. It is noteworthy that she was

simultaneously the goddess of divination, childbirth, and the generation of life. Her name is supposedly commemorated in a votive inscription on a 7th century buccher amphora from Chiusi and on a oinochoe from Traliatela. It is noteworthy that she is encountered with the sun god Usil on the Liber Linteus Zagradiensis mummy wrappings (TLE 1), as well as on many images. In regard to images of Thesan during the Orientalist period, a few works along this line are interesting, where Thesan is presented while flying. Her image on an acroterion within Leucothea's temple at Caere is also informative in this regard, which is currently placed at the Berlin Antikesamling. Thesan is taking away a young man (adolescent?) in her arms while flying (Figure 25).

88 Pallottino 1968

89 Bonfante 1986, 226
An image of Thesan on a bronze mirror from Vulci dating to 570 BC captures one's attention, where
the goddess has again taken up a young man in her arms and is flying away quickly Here there will
no longer be any digressions regarding interpretations of the image, according to which the myth of
Eos and Cephalus is depicted. This Greek version, in my opinion, represents a Hellenic attempt at
interpreting the Etruscan theme shown on the acroterion. (Figure 26)

Figure 26.
A reinforcement for an Etruscan vessel dating to 570 BC having an image of a flying woman and a
bronze Etruscan image currently kept on the island of Samos can be relegated to this group of images
(Figure 27).
Figure 27.

It is possible to surmise that the Etruscan Thesan stands beyond Taitle, which as a specially honored goddess and a patron of rejuvenation in Caere and Pyrgi, attends this initiation ritual and is perhaps trying to snatch up the rejuvenated young man. But the figure depicted on the Etruscan olpe is not a woman, attested by its connection to Daedalus and its naked depiction, which is impossible in the case of a goddess in the Etruscan reality of the Orientalization period. It is the opinion that some other male solar god might be here, encountered in Thesan's retinue. This might be the sun god Usil,\(^\text{90}\) who was also specially honored at the temple in Pyrgi (Figure 28).

In this respect, images of Usil from the Orientalist period at the A Temple in Pyrgi are especially interesting, manifesting a great similarity to the figure of Taitale depicted on the Cerveteri olpe.

\(^{90}\) Cristofani 2000, 313
Figure 28.

A bronze image of Usil supposedly from Vulci dating to approximately 490 BC and currently in a collection at the J. Paul Getty Museum is also interesting. (Figure 29)

Figure 29.
A brass stand created at the turn of the 6th-5th centuries BC is of the same type, which has been identified with Usil and today has been put on the auction at the Royal Athena Galleries (Figure 30).

2. Results

I suppose, that *hydria discovered in Cerveteri* with the image of the woman and a three-headed snake is not connected to Medea and must supposedly reflect the voyage of a deceased person to the underworld or some ritual connected to their burial, where the three-headed snake shows a creature living in (or guarding) the underworld, with this creature in turn being approached by a priestess or goddess (possibly Angitia or Vanth), or the deceased herself.

---

http://www.royalathena.com/PAGES/EtruscanCatalog/Bronze/BLL02JE.html
Thus in my opinion, it is the winged Etruscan solar god Usil/Catha standing beyond Teitale pictured on the Etruscan olpe from Caere. He had a local cult in Caere and images of him were typologically connected to winged images of Daedalus.

This connection was supposedly not based only on an iconographic similarity, but instead on a realization that the name of the winged Daedalus was in a certain relationship with the sun. It is possible to examine Medea as well in the same context as the granddaughter of Helios. Medea, who was connected to the Etruscan god Cavatha, the daughter of the sun Catha92, was naturally included in this narrative.

The rejuvenation of Jason by Medea is pictured on the Etruscan olpe, with an Etruscan ritual of rejuvenation and rebirth being read beyond it (this ritual is known from images and antique sources). This ritual was connected to solar cults, which were characteristic of many religions and the cult worship of Egypt and the East. The sun, being born anew every dawn, was perceived as a symbol of rejuvenation and rebirth.93

The ritual of rejuvenation in the context of the Etruscan tomb stirred up hope for the deceased's rebirth and immortality. The Etruscans' longing for cultural relationships with the Hellenic world is reflected by the perception of characters of the Argonaut myth as participants of the ritual, including Medea and Daedalus, a hero of a popular mythological narrative and a possessor of demonic power. At the same time, it answered a modal tendency of the Etruscan elite's infatuation with “foreign” culture. Images of Medea in Etruscan art confirmed from the Orientalist era to the Hellenization period represent an original, local interpretation of Medea's image. Etruscan culture, in turning out to be a mediator between the Greek andItalic worlds, performed a great role in popularizing Medea and the myths connected to her on the Appenine Peninsula. Medea's magical art turned out to be familiar to the Etruscans, who were well known all throughout the Mediterranean for divination and being experts of magic. In contrast to the Greeks, they turned Medea into an object of cult worship, identifying her with the Etruscan sun god Cavatha. She penetrated into the mythology, religion, and art of the ancient Italian people through the Etruscans. It can be said that the Etruscan reception of Medea influenced even ancient Rome, and later on, European art and culture Via Roma.
