

Day 1

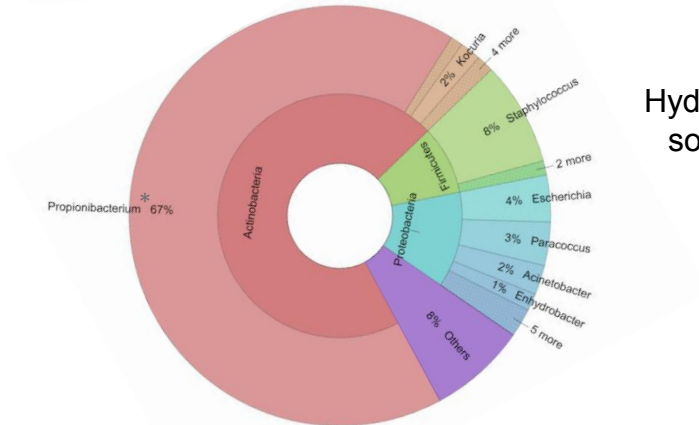

Day 4

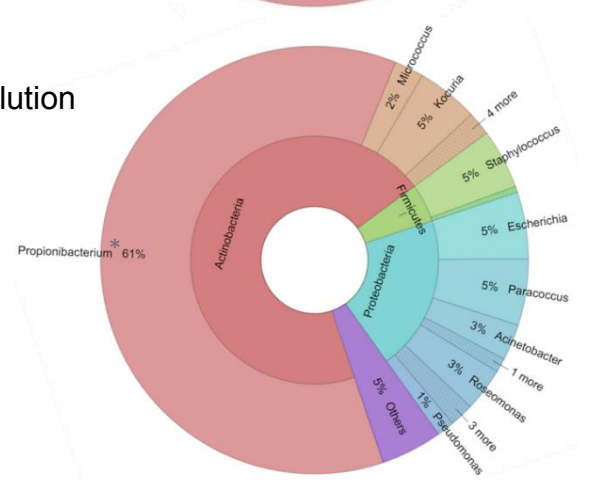

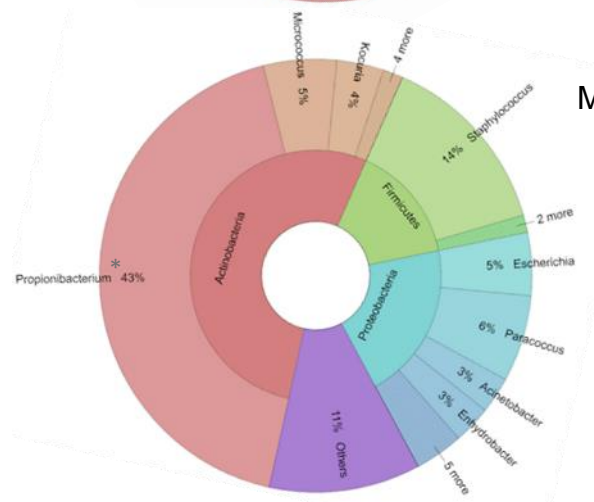

Control

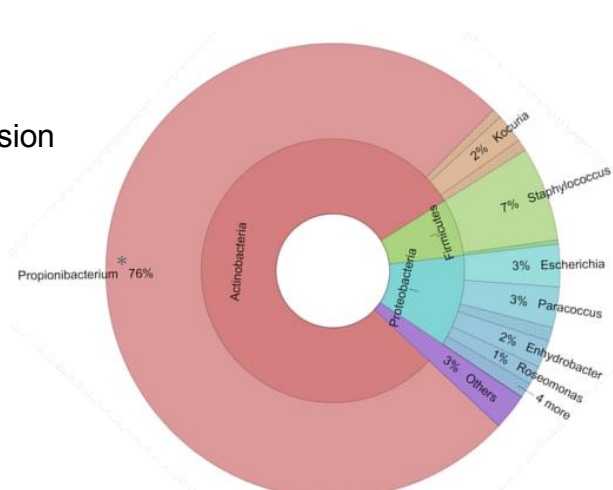

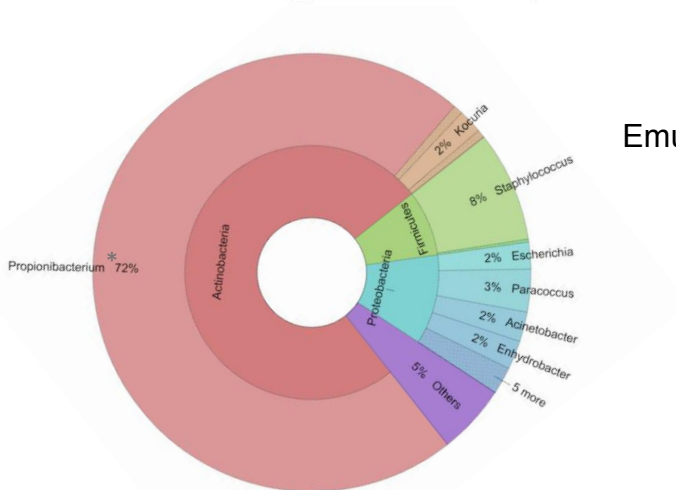

Hydrophilic solution

Micellar solution

Emulsion

**Figure S1:** Mean of relative abundance of the most represented bacterial taxa at phylum level (internal circle) and genus level (external circle) after 24 hours (Day 1) and four days (Day 4) of application of the hydrophilic solution, the micellar solution or the emulsion compared to their control. The “Others” category contains taxa that are represented in less than 30% of the samples. \*superseded genus name for *Cutibacterium*
