

Figure 1: Three different treatments; a) Treatment 1 (control), b) Treatment 2 (with coral) and c) Treatment 3 (with pipes)

Figure 2: Survival in juvenile red claw, Cherax quadricarinatus after 60 days. Bars with different letters ( $\mathrm{a}, \mathrm{b}, \mathrm{ab}$ ) were significantly different ( $\mathrm{p}<0.05$ )(mean $\pm$ S.D.)

Figure 3: Weight gain in juvenile red claw, Cherax quadricarinatus after 60 days. Bars with different letters ( $a, b, a b$ ) were significantly different ( $\mathrm{p}<0.05$ ) (mean $\pm$ S.D.)

Figure 4: Specific growth rates in juvenile red claw, Cherax quadricarinatus after 60 days. Bars with different letters ( $\mathrm{a}, \mathrm{b}, \mathrm{ab}$ ) were significantly different ( $\mathrm{p}<0.05$ ) (mean $\pm$ S.D.)

Figure 5: Carapace length in red claw, Cherax quadricarinatus after 60 days. Bars with different letters ( $\mathrm{a}, \mathrm{b}, \mathrm{ab}$ ) were significantly different $(\mathrm{p}<0.05$ ) (mean $\pm$ S.D.)

Figure 6: Total number of moulting in juvenile red claw, Cherax quadricarinatus after 60 days. Bars with different letters ( $\mathrm{a}, \mathrm{b}$ ) were significantly different ( $\mathrm{p}<0.05$ ) (mean $\pm$ S.D.)
