Abstract

The kind of set which is based on edges, is introduced. The analysis on this set is done in the matter of operation which are the classes of graphs. The general notion which is related to this concept, is up. The set of edges is seen in the matter of common vertex, entitled neighbor edges and the set of edges which has specific condition on the vertices of graphs, entitled ghost set. The kind of viewpoint when the edges are up so the kind of efforts to assign some notions which get the sensible result of edges which make sense about these two types of notions. Notions of having some attributes about vertices concerning edges and edges' attributes to get result about edges in the matter of vertices.

Keywords: Set, Ghost Set, Edge, Neighbor Edges.

AMS Subject Classification: 05C17, 05C22, 05E45, 05E14

1 Outline Of The Background

I'm going to refer to some books which are cited to the necessary and sufficient material which are covering the introduction and the preliminary of this outlet so look [Ref. [1], Ref. [2], Ref. [3], Ref. [4]] where Ref. [1] is about the textbook, Ref. [2] is common, Ref. [3] has good ideas and Ref. [4] is kind of disciplinary approaches in the good ways. Further references could be referred and could be addressed in Refs. [5–11].

2 Definition And Its Clarification

Definition 2.1. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. A set $\mathcal{B} \subseteq \mathcal{E}$ is **GHOST SET** if for any of vertex, there's the edge belongs to \mathcal{B} , which the vertex is one of its endpoint.

3 Relationships And Its illustrations

Theorem 3.1. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. Then \mathcal{E} is **GHOST SET**.

Theorem 3.2. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If \mathcal{B} is **GHOST SET**, then $\mathcal{A} \subseteq \mathcal{B}$ is **GHOST SET**.

Theorem 3.3. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If \mathcal{A}, \mathcal{B} is **GHOST SET**, then $\mathcal{A} \cup \mathcal{B}$ is **GHOST SET**.

Theorem 3.4. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a complete graph. Then the set of vertex's all edges is **HOST SET**.

Theorem 3.5. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a complete bipartite graph. Then the set of vertex's all edges belongs to every part, is **HOST SET**.

Theorem 3.6. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a complete multipartite graph. Then the set of vertex's all edges belongs to every part, is **HOST SET**.

Theorem 3.7. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be graph. If $\delta = \Delta = n - 1$, then the set of vertex's all edges, is **HOST SET**.

Theorem 3.8. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a path graph. Then the set of non-neighbor edges, is **HOST SET**.

Theorem 3.9. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a cycle graph. Then the set of non-neighbor edges, is **HOST SET**.

4 Results And Its Beyond

Definition 4.1. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. Edges belong to **HOST SET** are **NEIGHBOR EDGES**.

Theorem 4.2. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If degree of a vertex is Δ , then there's Δ number of **NEIGHBOR EDGES**.

Theorem 4.3. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be an even path graph. Then there's $\frac{n}{2}$ number of **NEIGHBOR EDGES**.

Theorem 4.4. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be an odd path graph. Then there's $\frac{n-1}{2}$ number of **NEIGHBOR EDGES**.

Theorem 4.5. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be an even cycle graph. Then there's $\frac{n}{2}$ number of **NEIGHBOR EDGES**.

Theorem 4.6. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be an odd cycle graph. Then there's $\frac{n-1}{2}$ number of **NEIGHBOR EDGES**.

Theorem 4.7. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a wheel graph. Then there's Δ number of **NEIGHBOR EDGES** and **HOST SET** has Δ elements.

Theorem 4.8. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a star graph. Then there's only Δ number of **NEIGHBOR EDGES** and **HOST SET** has Δ elements.

Theorem 4.9. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a star graph. Then there's only $n - 1$ number of **NEIGHBOR EDGES** and **HOST SET** has $n - 1$ elements.

Theorem 4.10. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a complete graph. Then for any vertex, there's only $\Delta = n - 1$ number of **NEIGHBOR EDGES** and **HOST SET** has $\Delta = n - 1$ elements.

Theorem 4.11. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. for any vertex, there's only $\Delta = n - 1$ number of **NEIGHBOR EDGES** and **HOST SET** has $\Delta = n - 1$ elements if and only if it's complete.

Theorem 4.12. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. For any vertex, there's only $\Delta = n - 1$ number of **NEIGHBOR EDGES** and there's only one **HOST SET** has $\Delta = n - 1$ elements if and only if it's star.

Theorem 4.13. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a Peterson graph. For any vertex, there's only 3 number of **NEIGHBOR EDGES** and there's **HOST SET** has $\Delta = 10$.

Theorem 4.14. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. Then For any vertex, number of **NEIGHBOR EDGES** $\leq n - 1$ and there's **HOST SET**'s element is $\leq \frac{n}{2}$.

Theorem 4.15. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $\frac{n}{2}$, then there's matching.

Theorem 4.16. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $\frac{n}{2}$, then there's embedding ladder graph.

Theorem 4.17. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $\frac{n}{2}$, then there's $\frac{n}{2}$ numbers of path graph with 2 vertices and one edge.

Theorem 4.18. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $n - 1$, then it's star.

Theorem 4.19. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $n - 1$, then it's complete.

Theorem 4.20. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If **HOST SET**'s element is $n - 1$, then it's wheel.

Theorem 4.21. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If $\mathcal{A} \cap \mathcal{B}$ is **HOST SET**, then \mathcal{A}, \mathcal{B} are **HOST SET**.

Theorem 4.22. Let $\mathcal{G} = (\mathcal{V}, \mathcal{E})$ be a graph. If $\mathcal{A} - \mathcal{B}$ is **HOST SET**, then \mathcal{A} is **HOST SET**.
