

S1. Supplemental Material. Picture of the acupuncture device (top) and how it should be mounted around the ear. The white arrows point to the parts of the device that can be adjusted to the individual ear.

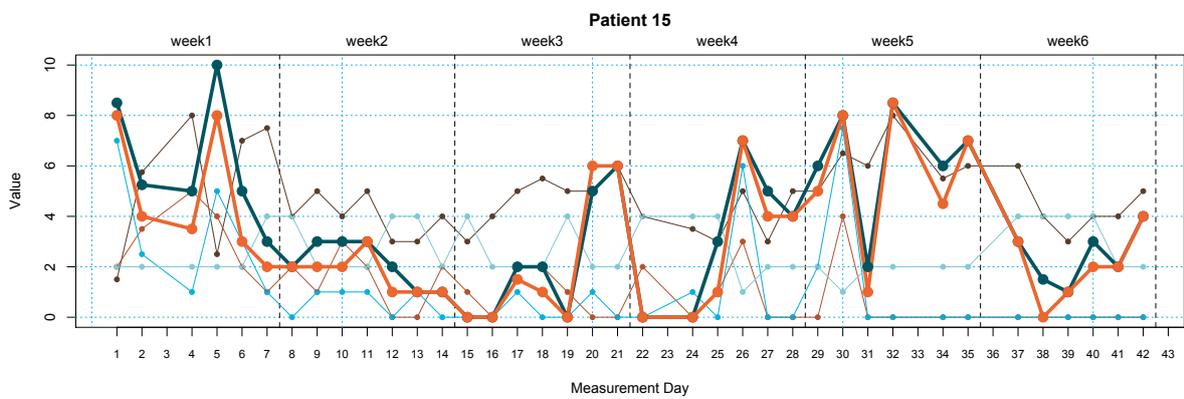

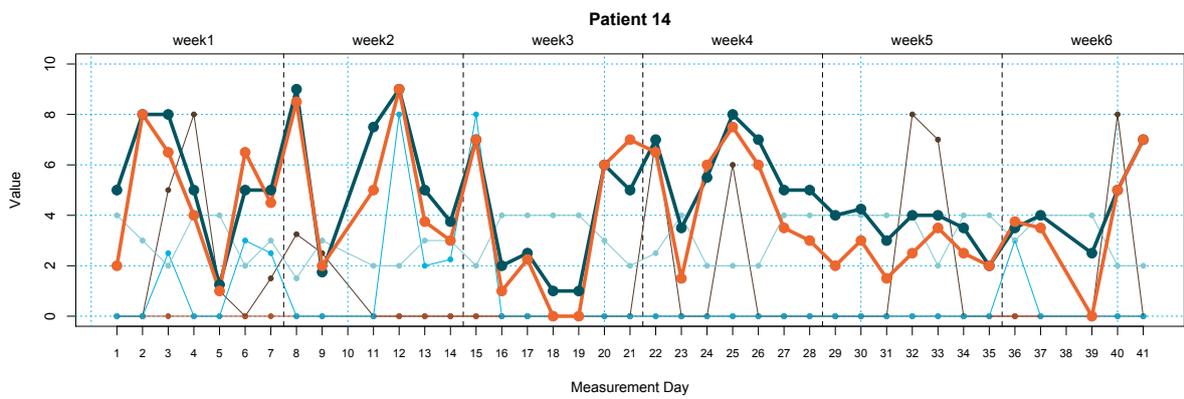

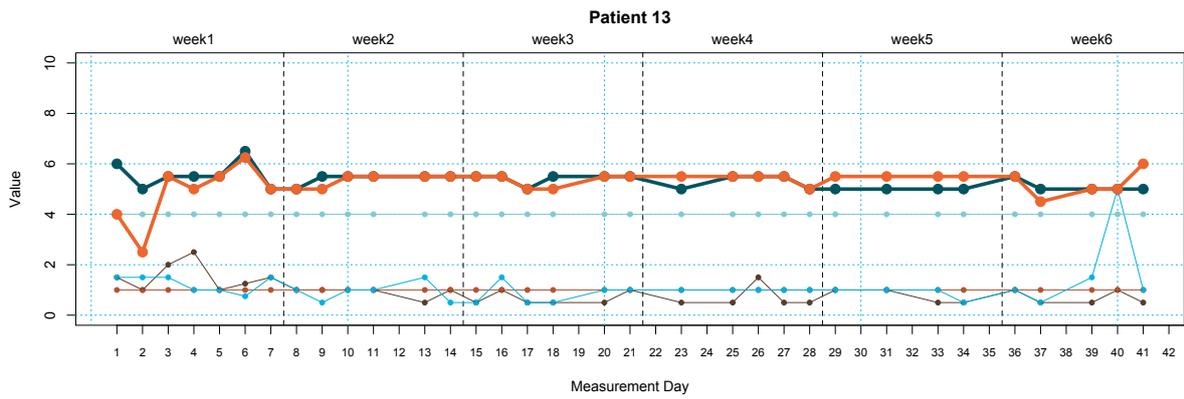

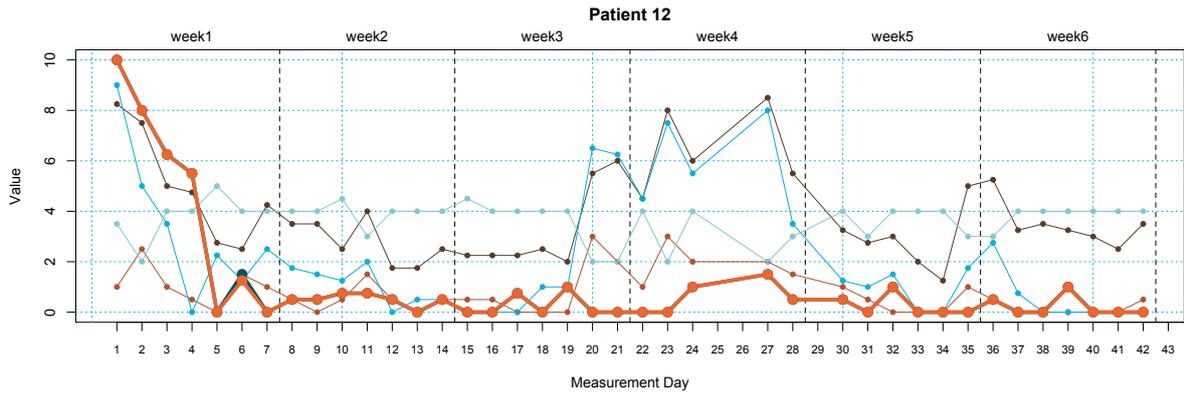

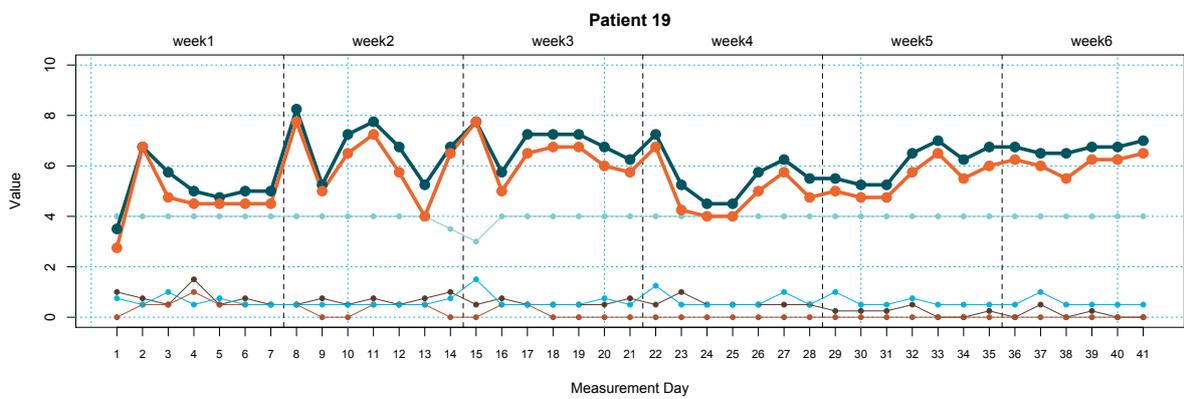

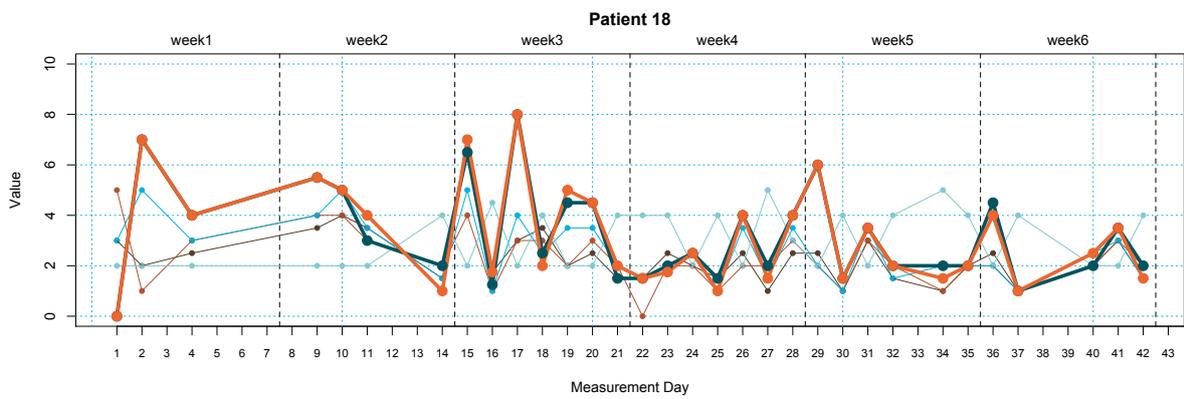

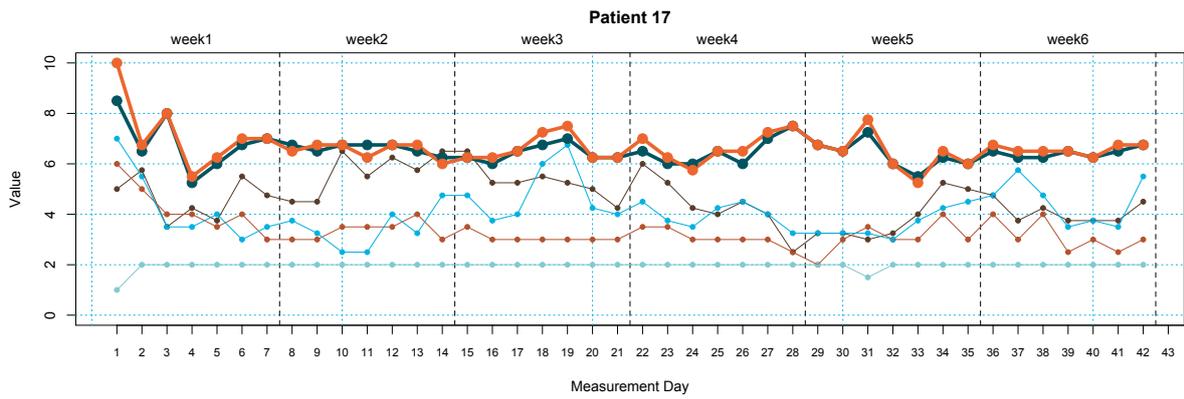

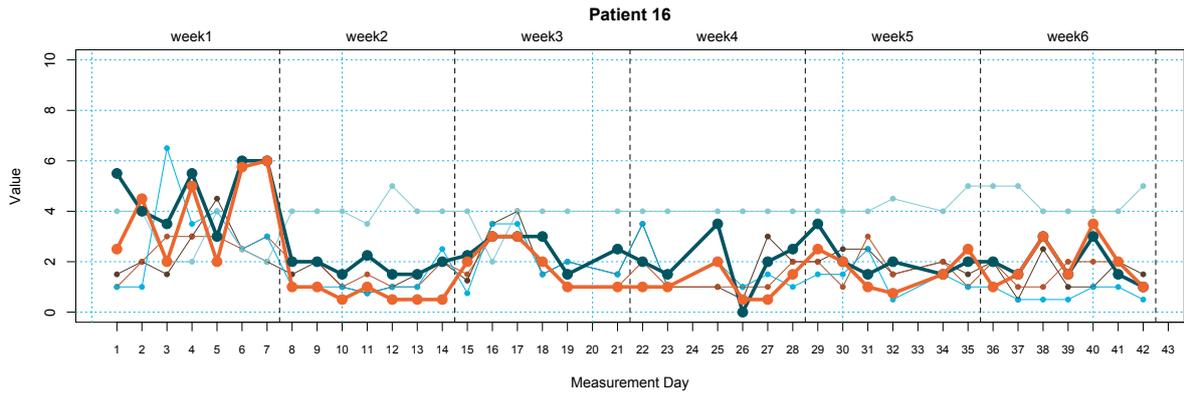

S2. Supplemental Material. Visualization of the individual data in the study group over the six-week period. Tinnitus loudness and tinnitus distress as the main outcome variables are drawn in thick lines.

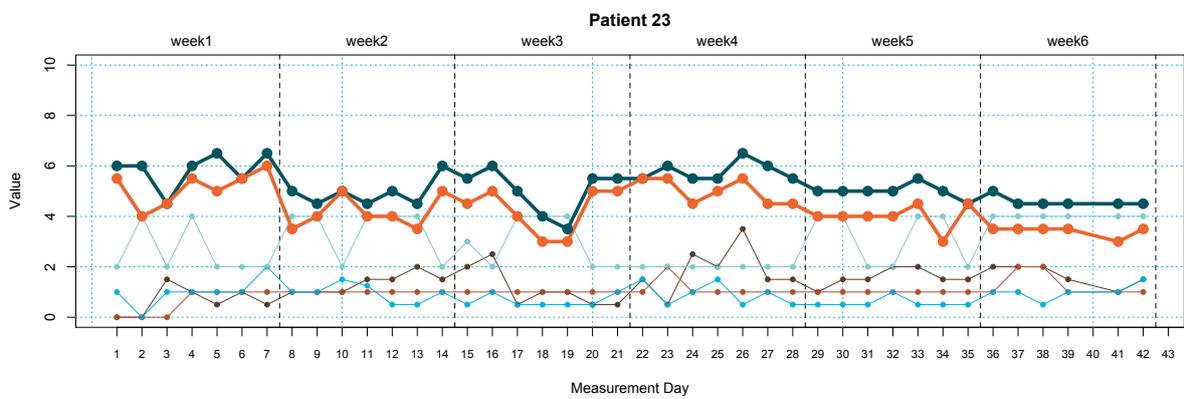

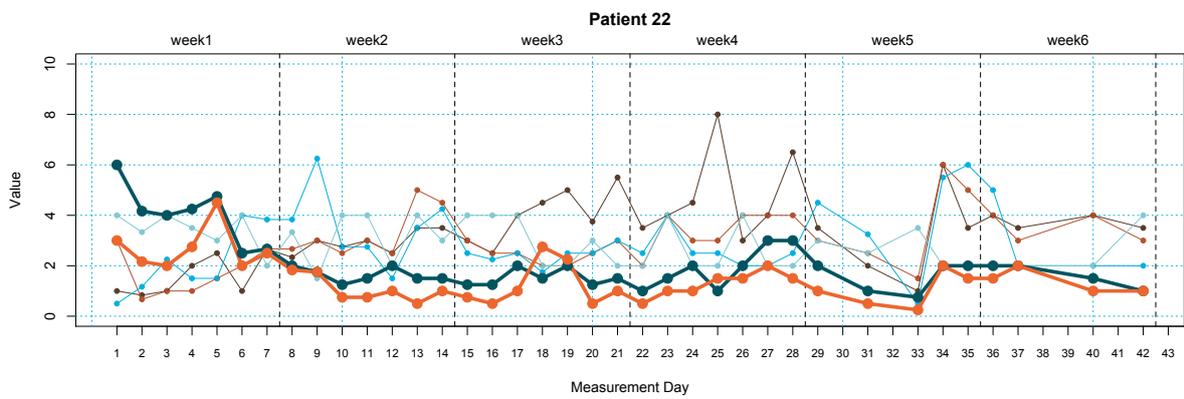

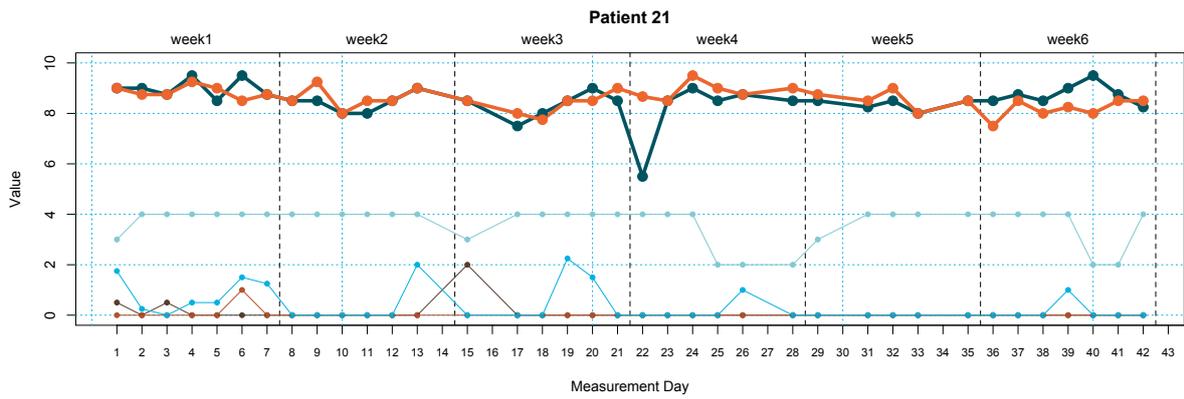

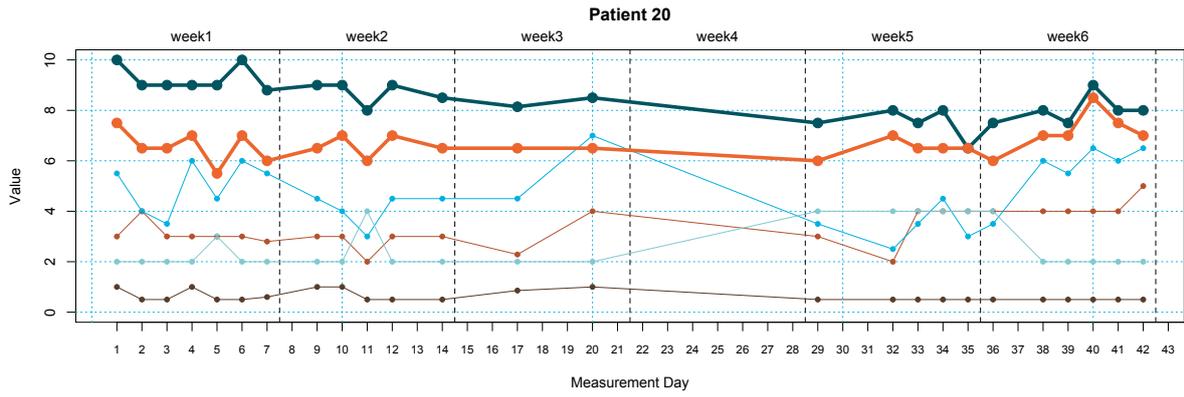

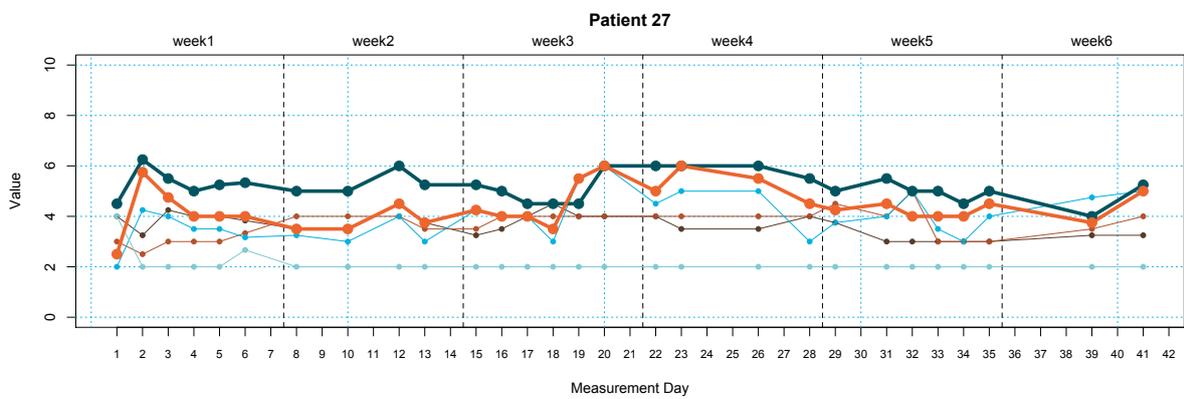

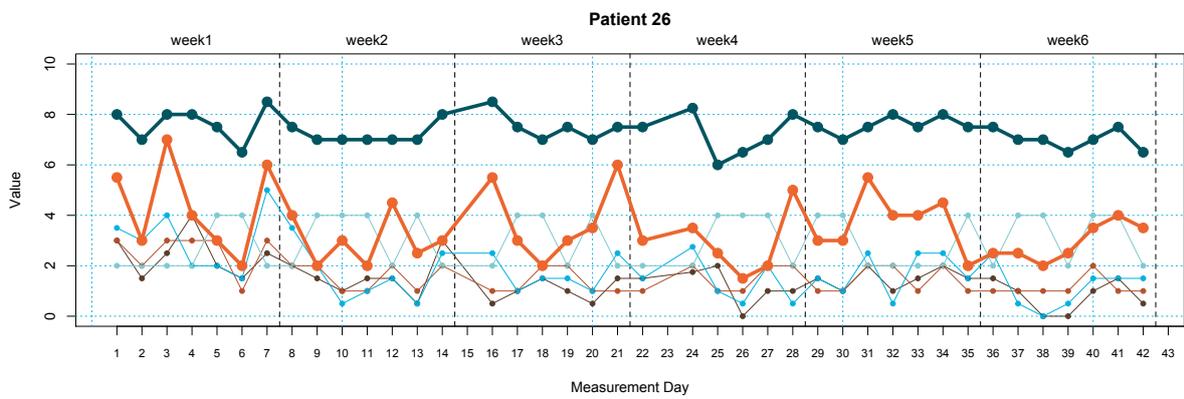

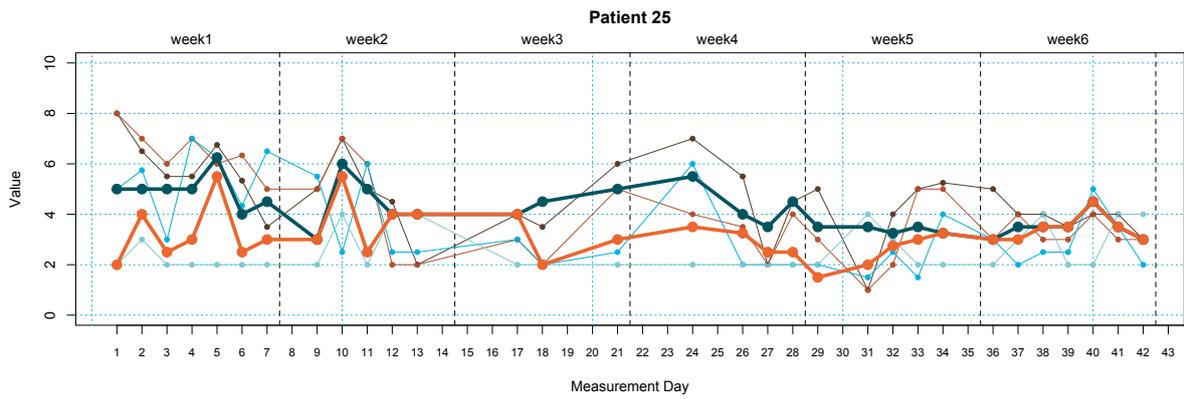

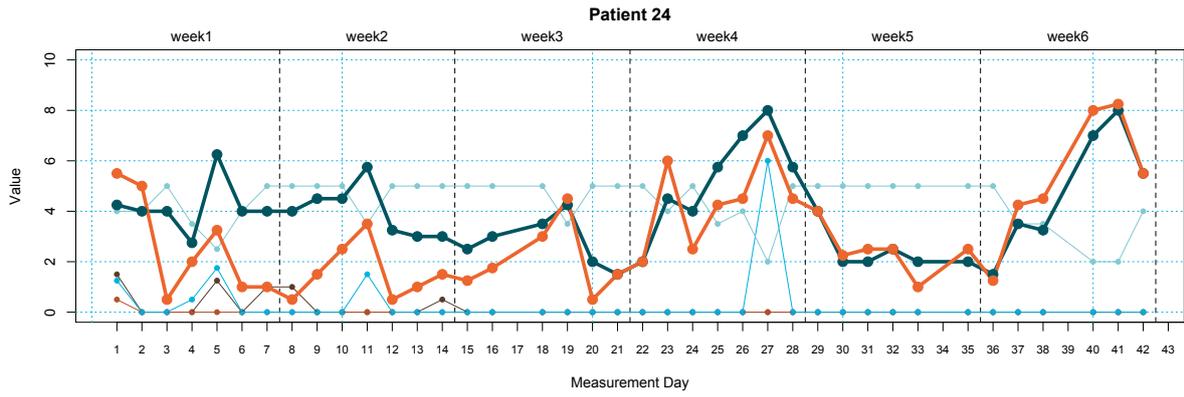

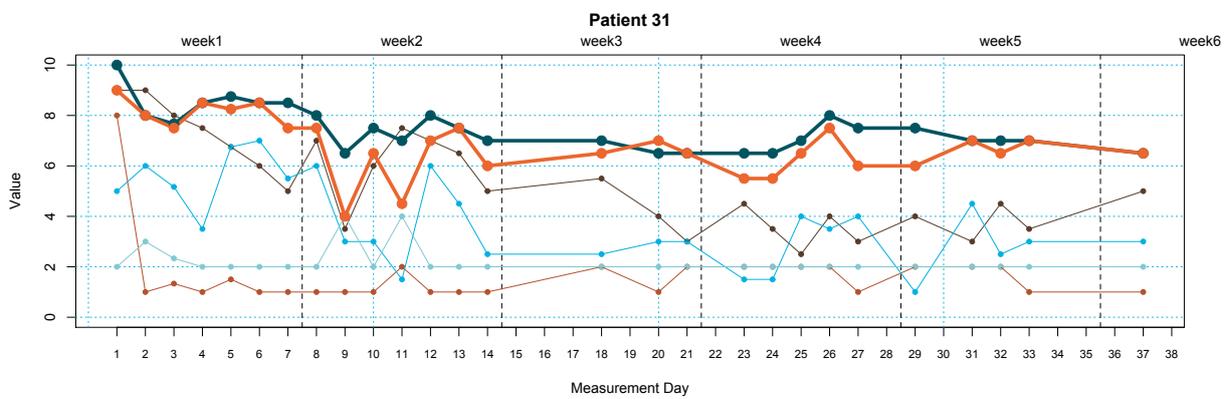

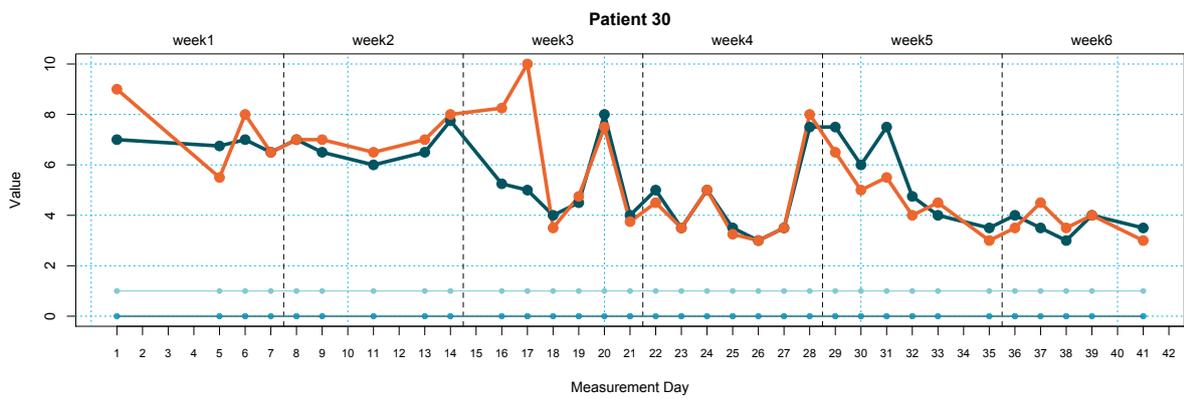

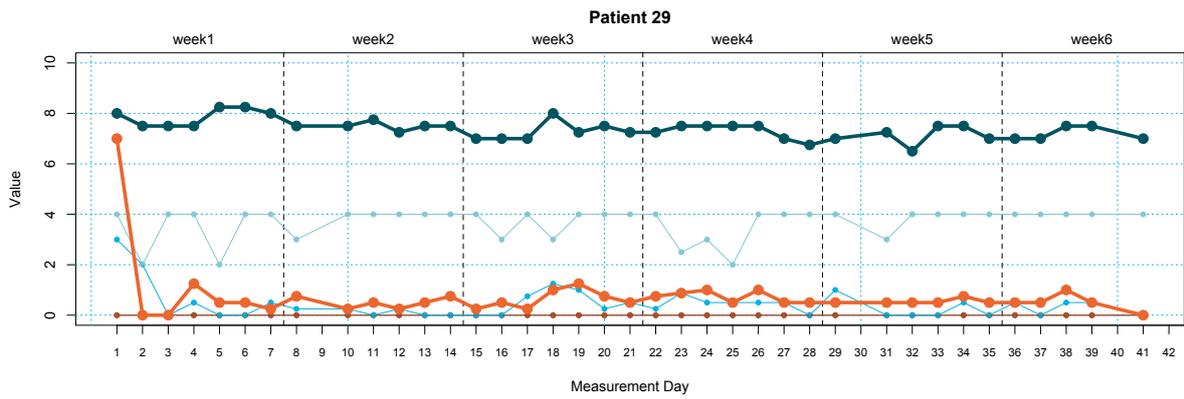

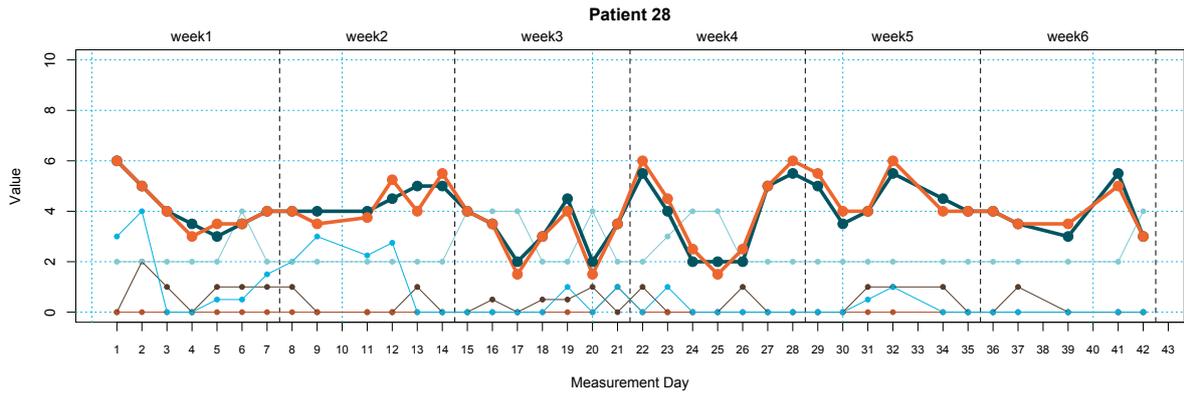

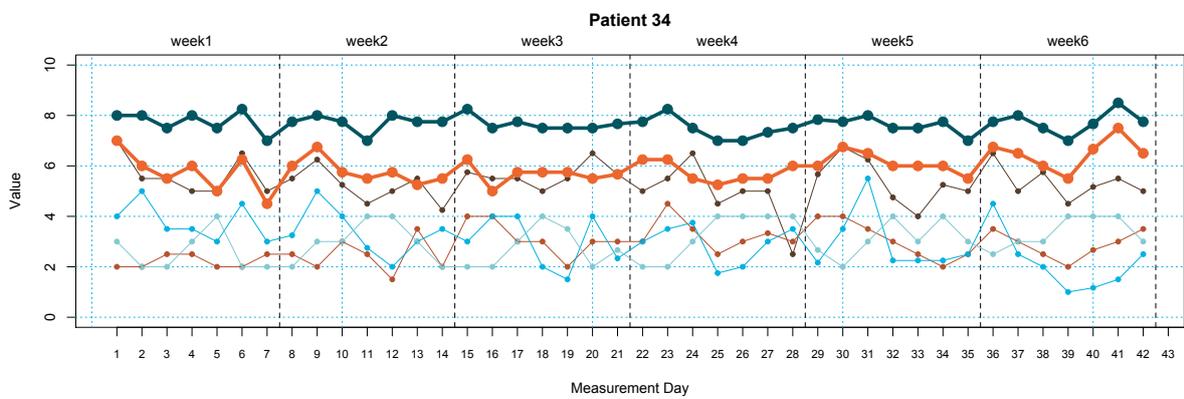

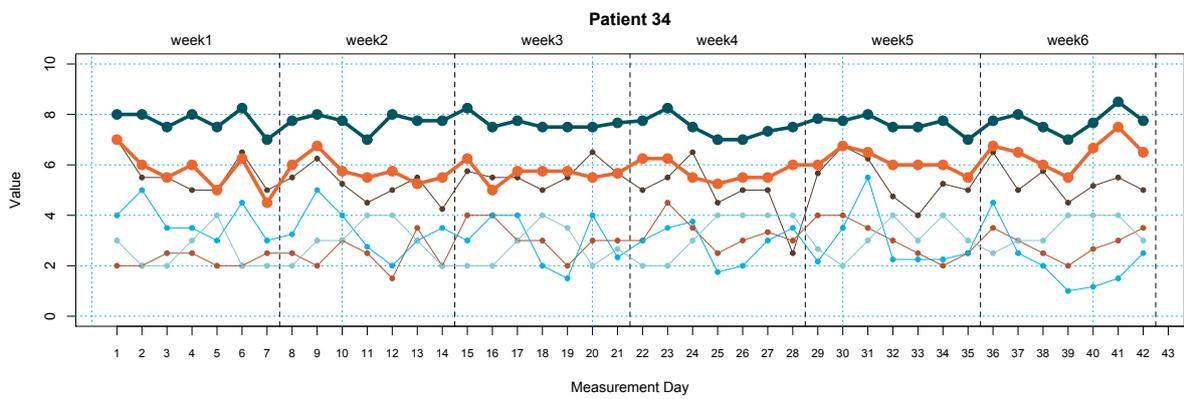

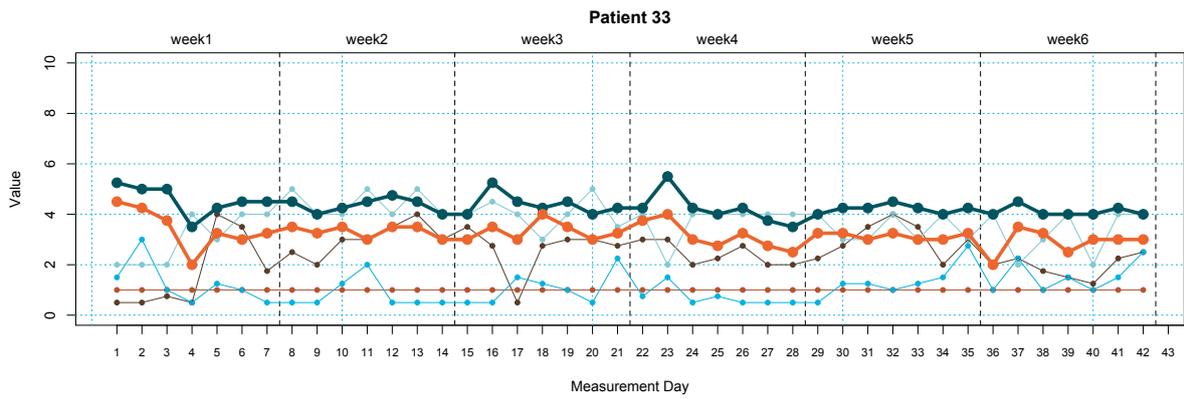

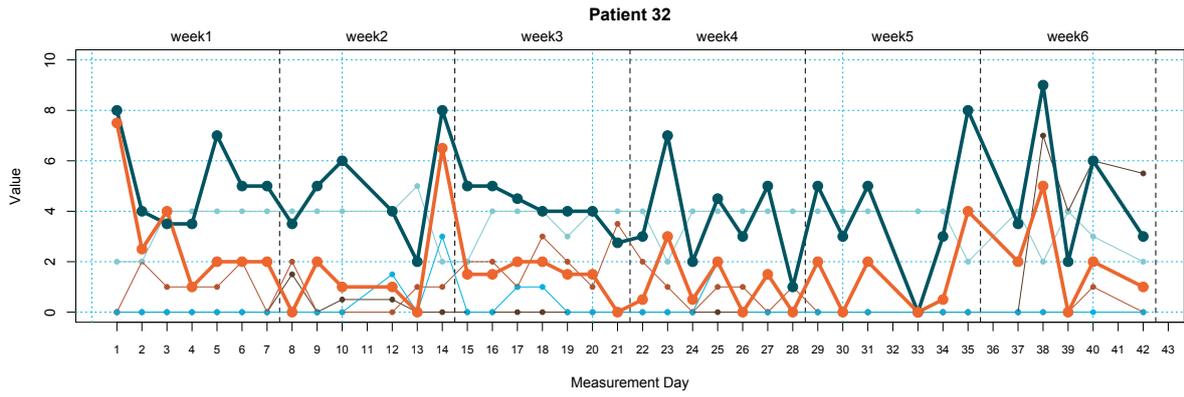

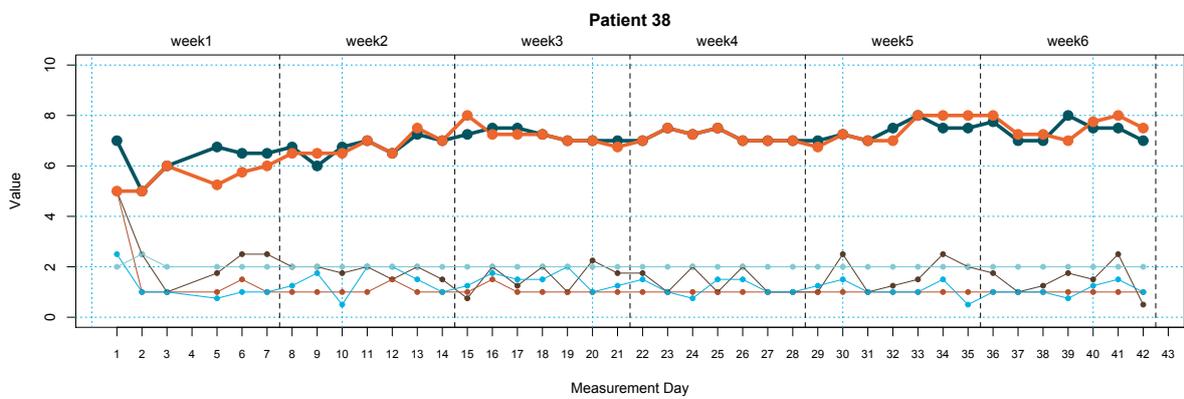

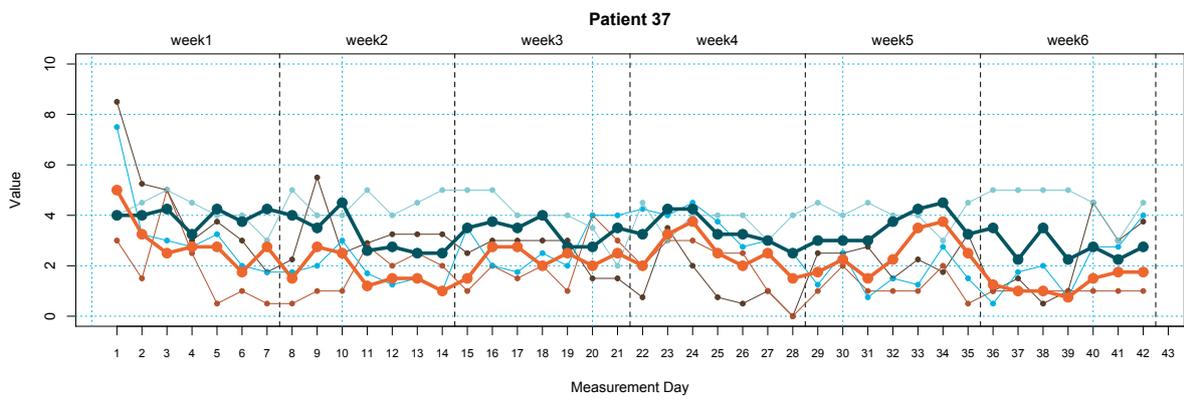

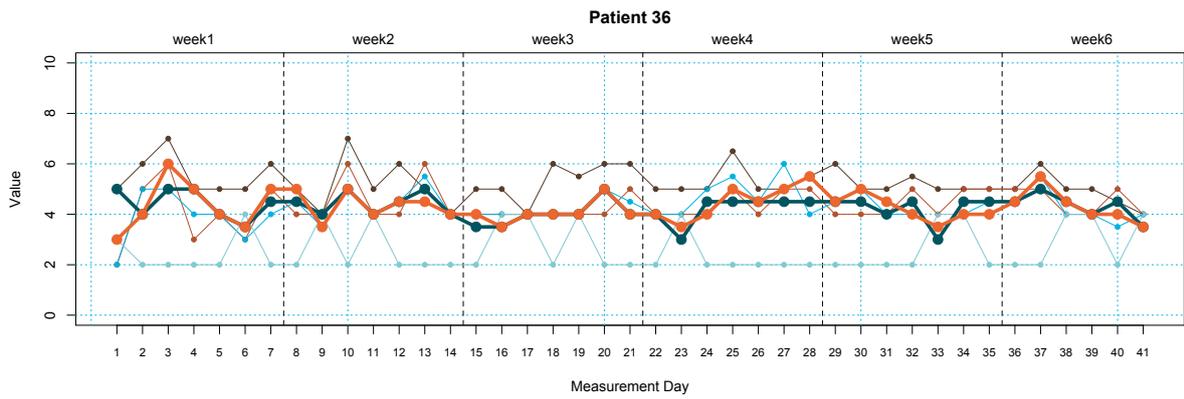

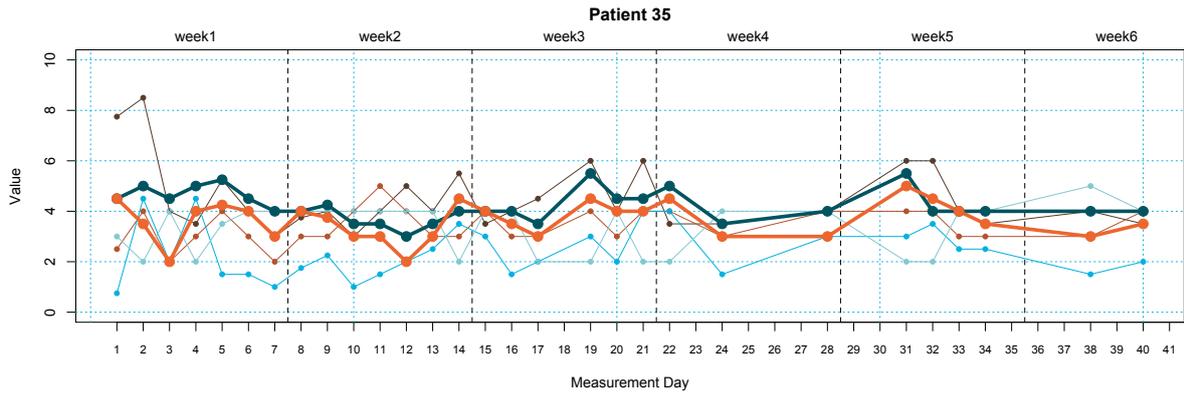

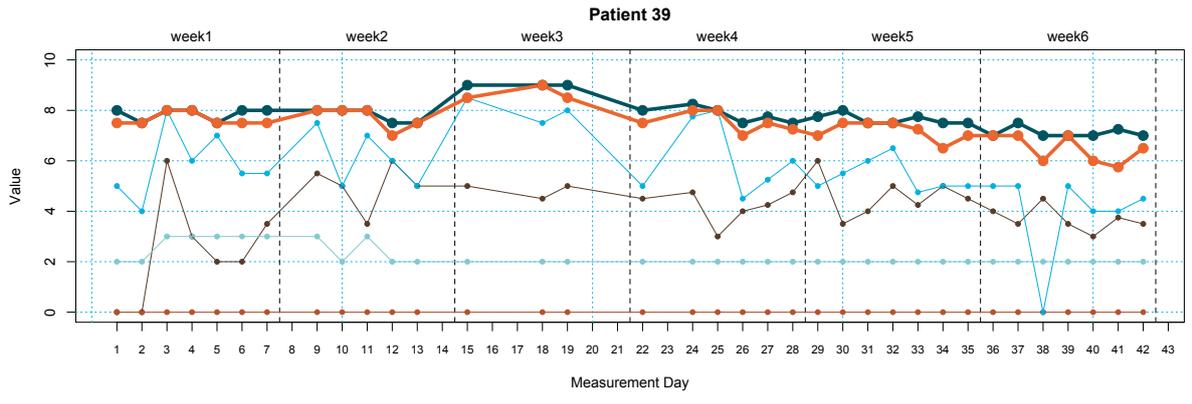

S3 Supplemental material. Overview of the linear regression estimated in the study group. Estimates are summerized and mean \pm standard deviation are provided in the table together with the range of estimates [min; max] .

Symptom	Intercept	Slope
Tinnitus Loudness	5.72 \pm 1.79 [3.16; 9.13]	-.023 \pm .027 [-.098; .030]
