Doctors' Survey on Medical Student Professional Dilemmas Introduction Dear Colleague, Thank you for your interest in this project. This survey should take 10 minutes to complete. The survey aims to: 1. determine how you view medical student professionalism 2. identify what areas of professionalism teaching may require further development 3. examine the role of context in professionalism This research project has ethics approval by UWA HREC. Your participation is voluntary and your anonymity will be ensured. The return of completed or part-completed questionnaires will be accepted as an indication that you have consented to participate You may withdraw from the survey at any time. Your responses will be anonymous and will not be used individually. This means that it will also not be possible to remove your responses from the database set collected should you wish to withdraw them later, The scenarios in the survey are designed to encourage reflection; not all of the responses are 'unacceptable'. If you have any questions or concerns you are welcome to contact the research team (email details below). Thanks for participating in this study which should provide valuable information into this important area of medical education. Dr Kiran Narula A/Prof Christine Jorm Dr Katrina Calvert Dr Paul McGurgan (paul.mcgurgan@uwa.edu.au) As we are interested in finding out if different groups of people have different views on medical student professionalism, we would like to find out some general information about you e.g. gender/age etc: Are you male or female? Male Female Prefer not to answer What age category are you? Under 25 25-35 36-45 46-55 56-65 66-75

Doctors' Survey on Medical Student Professional Dilemmas

Main survey: There are 20 professional dilemmas to complete

The scenarios in the survey are designed to cover challenging areas in medical students work and personal lives. Not all of the responses are 'Unacceptable'.

Q 1. A senior medical student is performing their obstetric clerkship. They conduct routine antenatal examinations in the antenatal clinic under the supervision of a consultant. Despite not having experienced problems measuring blood pressure (BP) on patients before, today the senior student is unable to hear any discernible Korotkoff sounds. As this is a fundamental skill, the student decides to fabricate the result and say the BPs are all around 125/70. The fabrication is detected because the consultant is surprised when one of the antenates they knew had essential hypertension has a 'normal' pregnancy BP recorded. The consultant re-checks the patient's blood pressure and discovers that the stethoscope is not working.

This student's behaviour is:

Q 1. A 2nd year medical student is performing their obstetric clerkship. They conduct routine antenatal examinations in the antenatal clinic under the supervision of a consultant. Despite not having experienced problems measuring blood pressure (BP) on patients before, today the 2nd year student is unable to hear any discernible Korotkoff sounds. As this is a fundamental skill, the student decides to fabricate the result and say the BPs are all around 125/70. The fabrication is detected because the consultant is surprised when one of the antenates they knew had essential hypertension has a 'normal' pregnancy BP recorded. The consultant re-checks the patient's blood pressure and discovers that the stethoscope is not working.

Q 6. A 4th year student is completing their GP placement. The student notes that the GP does not use gloves whilst performing minor operations. The GP later asks the student to perform a skin resection for a small lesion on a patient's arm. The student prepares their surgical equipment. When they ask for gloves, the GP replies, "Gloves are unnecessary, this is an 80 year old woman with no risk factors for blood borne viruses and a probable basal cell lesion- go ahead". The student performs the procedure without gloves. This student's behaviour is: Q 6. A 4th year student is completing their GP placement. The student notes that the GP does not use gloves whilst performing minor operations. The GP later asks the student to perform a skin resection for a small lesion on a patient's arm.
