To plot

The basics are calculated

- -cosine CalCos.txt
- Inverted triangle CalIVTrig.txt
- FM CalFM.txt
- Zero zero.txt

Simulated

- The residual SimCaldiff.txt
- Quaternion full SimCos.txt ok
- Inverted triangle SimIVTrig.txt ok
- FM SimFM.txt ok
- RawData RawData.txt ok
- FM-Sine Fit FMSin.txt ok
- QMvsQUAT QMvsQUAT.txt ok

The basic plot for correlations:

```
set xrange [0:360]
set yrange [-1:1.1]
set xtics 45
set sample 400
set title "Correlation" font ",12"
set xlabel "(a - b)" font ",12"
```

Installation

Issues

If no screen output is available in installation, try

```
sudo apt-get update
```

```
sudo apt-get install gnuplot-x11
```

Plot commands

Plotting column a against column b

```
plot "filename" using a:b with lines/points/ linecolor rgb "colour-name"
```

(a and b are column numbers)

```
plot "filename" using ($a/100):b ...
```

Key label for a particular line

```
plot ... title 'Plot-title'
```

Settings

Set the line style in following plot commands

```
set style data lines/points/
```

Set various labels in following plot commands

```
set title "plot-title" font ",12"
```

```
set xlabel "x-axis-label" font ",12"
```

```
set ylabel "y-axis-label" font ",12"
```

Label the lines in-situ in following plot command

```
set label 1 'text for label line 1'
```

Set aspect ratio for following plot command

```
set size ratio-x, ratio-y
```

(e.g. set size 1, 0.5 makes the plot half as high as wide)

or

```
set size ratio ratio-value
```

(e.g. set size ratio 0.5 does the same as the above)

Set tic details

```
set xtics delta-x font ",12"
```

Key

```
unset key
```

```
set key
```

```
set key bottom right
```

```
set key font ",24"
```

Output

```
set term postscript color
```

```
set output "filename.ps"
```

Short cuts

Define multiple line attributes

```
set style line line-number lt 2 lc rgb "colour-name" lw 2
```

lt=line type (1=continuous, 2=dashed, 3=dotted, 4=dot-dashed, 5=dot-dot-dashed)

lw=line width

Plot with

```
plot "file-name" ls line-number
```
