

Figure S1. The control of vital dye CFSE labeling of CD8 T-cells prior to cell therapy. (a) Unlabeled cells; (b) cells labeled with CFSE.

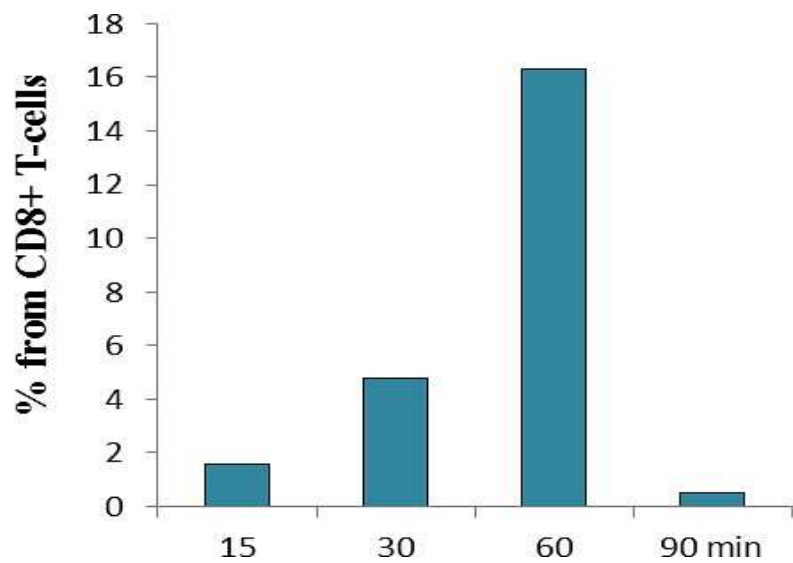

Figure S2. The content of CFSE-labeled CD8⁺ T-cells (% of the CD8⁺ T-cell population) isolated from the spleen of C57BL/6 donor mice in the lungs of C57BL/6 recipient mice 15, 30, 60, 90 min after cell therapy (M \pm m).
