

Supplementary materials

Supplementary Figure S1. Variation of mosaic symptoms intensity in leaves of sugarcane variety infected by SCSMV, SCMV, and SrMV. (A) Single infection by SCSMV in Cening, HW Merah, NXI-4T, PS58, PS882, NX01, and NX04 cultivars, (B) Mixed double infection by SCSMV and SCMV in PS881 and PS882 cultivars, and (C) Mixed triple infection by SCSMV, SCMV, and SrMV in PS881 cultivar

Supplementary Figure S2. RT-PCR amplification of CP gene of SCSMV (upper), SCMV (middle), and SrMV (lower) in leaves of sugarcane PS881. M, DNA molecular size marker; line 1, 2, 3 are single; line 4, 5, 6 are double; line 7, 8, 9 are triple infection.
